Somatic and Autonomic Regulation in Sleep Elio Lugaresi, Pier L. Parmeggiani, 2012-12-06 This volume contains the contributions to a course entitled Sleep and its Pathology which was organized by the Advanced School of the Italian Neuroscience Society at the Alessandro Volta Center of Scientific Culture Villa Olmo Como Italy May 9 10 1996 The course was aimed at informing the medical audience about recent developments in the field with particular regard to the work of the sleep laboratories of the University of Bologna The first part of this book presents experimental results dealing with the biochemical specificity of hypothalamic sleep mechanisms cerebral metabolism during sleep and the sleep dependent systemic cardiovascular adjustments in relation to blood perfusion and thermal homeostasis of the brain The second part covers pathophysiological aspects of human sleep namely the circadian rhythm of body core temperature in neurodegenerative diseases the descriptive epidemiology of excessive daytime sleepiness the disorders of breathing and motor control in sleep and the syndrome of nocturnal frontal lobe epilepsy The Editors hope that the book may be useful not only to specifically interested readers but also to general practitioners The Editors wish to express special thanks to Professor Eugenio E Muller for his suggestion to collect the lectures in book form The Editors thank the authors for their contributions to the course and to this publication and express their appreciation to Springer Verlag for helping make this monography possible *Sleep Disorders Handbook* Peretz Lavie, Giora Pillar, Atul Malhotra, 2002-06-27 Recent years have seen the rapid development of sleep medicine as a new medical subspecialty It is estimated that at least 30% of the adult population suffer at least once from some sort of sleep disturbance Patients with sleep disorders are frequently among the most difficult to treat and account for a high percentage of absenteeism in the workp **Autonomic Failure** Christopher J. Mathias, Sir Roger Bannister, 2013-06-13 This fifth edition of the Autonomic Failure covers the many recent advances made in our understanding of the autonomic nervous system There are numerous new chapters and extensive revisions of all other contributions This volume makes diagnosis increasingly precise by fully evaluating the underlying anatomical and functional deficits thereby allowing more effective treatment It continues to provide a rational guide to aid in the recognition and management of autonomic disorders for practitioners from a variety of fields including neurology cardiology geriatric medicine diabetology and internal medicine **Bioinformatics of the Brain** Kayhan Erciyes, Tuba Sevimoglu, 2024-09-25 The brain consisting of billions of neurons is probably the most complex and mysterious organ of the body Understanding the functioning of the brain in its health and disease states has baffled the researchers working in this area for many years The diversity of brain diseases and disorders makes the analysis of brain functions an even more challenging area of research In vitro and in vivo studies regarding the brain may be laborious however bioinformatics using in silico approaches may take the burden off the experimental studies and give us a clearer perspective on disease and healthy states of the brain its functions and disease mechanisms Recent advancements in neuroimaging technologies the development of high performance computers and the

development of software algorithms and methods to analyze data obtained from various neuroimaging processes have opened new frontiers in neuroscience enabling unprecedented finer analysis of the brain functions This relatively new approach of brain analysis which may be termed Bioinformatics of the Brain is the main subject of this volume aiming to provide a thorough review of various bioinformatics approaches for analyzing the functioning of the brain and understanding brain diseases such as neurodegenerative diseases brain tumors and neuropsychiatric disorders Authors from various disciplines in this volume each focus on a different aspect aiming to expand our understanding of this area of research Topics included are Brain diseases and disorders Stem cell therapy of neurodegenerative diseases Tissue engineering applications of gliomas Brain tumor detection and modeling Brain tumor growth simulation Brain computer interface Bioinformatics of brain diseases Graph theoretical analysis of complex brain networks Brain proteomics This book is intended to aid scientists researchers and graduate students in carrying out interdisciplinary research in the areas of bioinformatics bioengineering computer engineering software engineering mathematics molecular biology genetics and biotechnology
