

It is it doesn't take much to violate the operative notion that this form of discourse must be emotion neutral. Realistically, the only viable solution to the problem of close-mindedness is to carefully consider if the ideas we justify as knowledge are defensible regardless of personal ideology, and to resist turning a blind eye to ideas we may be inclined to reject spontaneously and uncritically. As a concrete example, it would mean that if we held strongly to psychoanalytic principles, we would not reject out of hand evidence of a cognitive mechanism operating in symptom formation. Coming straight to the point, however strong our commitment might be to an ideology it should never condemn us off from considering the possible relevance of other concepts about human behavior.

So we unapologetically acknowledge that a purpose of this article is to challenge ideas tied to the DSM-IV and FBI paradigms that many now assume to be fact; to offer an understanding of why they hold only a piece of truth about AN—an important piece to be sure—but not a whole truth, and to see that when a less demanding theoretical and clinical calculus is applied to causal biology and psychopathology that in complex is inevitably less disappointing. Our objective thus brings us to several touching questions: Why do our treatments help some but not others? What brings well-intentioned care givers to do unwise things? And why has there been precariously little discussion at recent Academy meetings about the importance of approaching AN with diverse treatment skills?

The Challenge and Its Complexities

That the questions are timely should be clear to anyone who has attempted to fully understand the illness. AN expresses a more or less lawful history and clinical presentation, but once it takes hold its clinical features shift quickly in directions not easily anticipated. We do our best to learn patterns that they are feeling the pull of misguided ideas, but they are more deaf to the standard logic applied to health. In them, only one wisdom matters: whatever actions occurred in losing more weight is a sensible advance to strike. Of course the search for inherited genes should continue, because the effort is as important to AN as to any other psychiatric illness. AN is certainly a multifactor condition whose eventual expression depends on multiple predisposing traits, chief among which are anxious worry and hypervigilance, reward deficits, compulsiveness of habit, and an obsessional thought structure. But to assume that everything about it is

encoded in the genome, that a single biological calculus will crack open the mystery because environmental influences are trivial, that our culture's embrace of a thin body ideal is the primary mono-genetic trigger that sustains focus in prevention efforts are notions that seriously misjudge all of what the illness embodies.

Another facet of AN particularly unsettling, especially for the less seasoned therapist, is that the clinical acumen therapists need builds slowly but the fear the illness strikes is instantaneous. And it's a different sort of fear, not that cases little to nothing about our background—student, beginner, scholar, or therapy veteran—what we look like, the gentleness of our manner, even the dedication we bring to the work is immaterial. AN is maddening because the interpersonal context it creates is impersonal and insistent, which is why it doesn't take long for patients to turn uncooperative and for things to fall out of our hands. And when it does, the risk for treatment to lurch back and forth in ways perceived by patient and family as irrelevant or needlessly inflexible—or, maybe too flexible—will be great. This means in certain where the fear strikes, challenges will mount quickly and before long skeptical loved ones will start questioning our every strategy; this is where we learn never to presume that treatment approach in AN is straightforward, not because it never is, but because in so many cases it isn't. The common lesson learned in clinical work is that the skill set needed to keep the management of AN on track transcends what is portrayed in the most rigorously articulated treatment manual.

Historical Footnotes

In 1982, Paul Garfinkel and David Gorman published a highly regarded discussion of the multidimensional character of AN.¹⁶ Johnson and Gross followed in 1987¹⁷ with a similar book exploring bulimia nervosa from a bio-psych-social perspective. Thus, well over two decades ago there was awareness that eating disorders would require analyses that kept multiple levels of discourse in play, each having unique value, but history fades quickly and this bit of seminal discourse now sits on the side lines, paid little more than lip service—acknowledged, but more as an afterthought. So at the same time that our annual workshops and plenary talks are stressing integration and synthesis, resistance to setting aside favored ideas remains strong. Again, we are not denying differences of opinion—it is a sacred part of scientific and clinical debate. But there is no opportunity for wider dialogue about ideas relevant to issues of causality or
