Some Connections Between Isoperimetric And Sobolev Type Inequalities:

Some Connections between Isoperimetric and Sobolev-type Inequalities Serguei Germanovich Bobkov, Christian Houdré, 1997 For Borel probability measures on metric spaces this text studies the interplay between isoperimetric and Sobolev type inequalities In particular the question of finding optimal constants via isoperimetric quantities is explored Also given are necessary and sufficient conditions for the equivalence between the extremality of some sets in the isoperimetric problem and the validity of some analytic inequalities The book devotes much attention to the probability distributions on the real line the normalized Lebesgue measure on the Euclidean spheres and the canonical Gaussian measure on the Euclidean space

Concentration, Functional Inequalities and Isoperimetry Christian Houdré, 2011 The interactions between concentration isoperimetry and functional inequalities have led to many significant advances in functional analysis and probability theory Important progress has also taken place in combinatorics geometry harmonic analysis and mathematical physics with recent new applications in random matrices and information theory This will appeal to graduate students and researchers interested in the interplay between analysis probability and geometry

Hodge Theory in the Sobolev Topology for the de Rham Complex Luigi Fontana, Steven George Krantz, Marco M. Peloso, 1998 In this book the authors treat the full Hodge theory for the de Rham complex when calculated in the Sobolev topology rather than in the L^2 topology The use of the Sobolev topology strikingly alters the problem from the classical setup and gives rise to a new class of elliptic boundary value problems The study takes place on both the upper half space and on a smoothly bounded domain It features a good introduction to elliptic theory pseudo differential operators and boundary value problems theorems completely explained and proved and new geometric tools for differential analysis on domains and manifolds

Sobolev Spaces Vladimir Maz'ya, 2011-02-11 Sobolev spaces play an outstanding role in modern analysis in particular in the theory of partial differential equations and its applications in mathematical physics They form an indispensable tool in approximation theory spectral theory differential geometry etc The theory of these spaces is of interest in itself being a beautiful domain of mathematics The present volume includes basics on Sobolev spaces approximation and extension theorems embedding and compactness theorems their relations with isoperimetric and isocapacitary inequalities capacities with applications to spectral theory of elliptic differential operators as well as pointwise inequalities for derivatives The selection of topics is mainly influenced by the author's involvement in their study a considerable part of the text is a report on his work in the field Part of this volume first appeared in German as three booklets of Teubner Texte zur Mathematik 1979 1980 In the Springer volume Sobolev Spaces published in English in 1985 the material was expanded and revised The present 2nd edition is enhanced by many recent results and it includes new applications to linear and nonlinear partial differential equations New historical comments five new chapters and a significantly augmented list of references aim to create a broader and modern view of the area

A Continuum Limit of the Toda Lattice Percy Deift, Kenneth T-R McLaughlin, 1998 In this book the

authors describe a continuum limit of the Toda ODE system obtained by taking as initial data for the finite lattice successively finer discretizations of two smooth functions Using the integrability of the finite Toda lattice the authors adapt the method introduced by Lax and Levermore for the study of the small dispersion limit of the Korteweg de Vries equations to the case of the Toda lattice A general class of initial data is considered which permits in particular the formation of shocks A feature of the analysis in this book is an extensive use of techniques from the theory of Riemann Hilbert problems **Basic**

Almost-Poised Hypergeometric Series Wenchang Chu, 1998 Presents a systematic treatment for the evaluation of basic almost poised series Some 200 identities are covered among which most are believed to be new Their connections with the q Clausen formulae as well as Rogers Ramanujan identities are sketched No index Annotation copyrighted by Book News Inc Portland OR **Lie Groups and Subsemigroups with Surjective Exponential Function** Karl Heinrich

Hofmann, Wolfgang Ruppert, 1997 In the structure theory of real Lie groups there is still information lacking about the exponential function Most notably there are no general necessary and sufficient conditions for the exponential function to be surjective It is surprising that for subsemigroups of Lie groups the question of the surjectivity of the exponential function can be answered Under nature reductions setting aside the group part of the problem subsemigroups of Lie groups with surjective exponential function are completely classified and explicitly constructed in this memoir There are fewer than one would think and the proofs are harder than one would expect requiring some innovative twists The main protagonists on the scene are $SL(2, \mathbb{R})$ and its universal covering group almost abelian solvable Lie groups ie vector groups extended by homotheties and compact Lie groups This text will also be of interest to those working in algebra and algebraic geometry

Flat Extensions of Positive Moment Matrices: Recursively Generated Relations Raúl E. Curto, Lawrence A. Fialkow, 1998 In this book the authors develop new computational tests for existence and uniqueness of representing measures μ in the Truncated Complex Moment Problem $\gamma_{ij} = \int \bar{z}^i z^j d\mu$ $0 \leq i, j \leq 2n$ Conditions for the existence of finitely atomic representing measures are expressed in terms of positivity and extension properties of the moment matrix $M_n(\gamma)$ associated with $\gamma \equiv \gamma_{2n}$ $\gamma_{00} \dots \gamma_{0, 2n} \dots \gamma_{2n, 0} \gamma_{00} \dots \gamma_{0, 2n}$ This study includes new conditions for flat i.e rank preserving extensions M_{n+1} of M_n $g \geq 0$ each such extension corresponds to a distinct rank M_n atomic representing measure and each such measure is minimal among representing measures in terms of the cardinality of its support For a natural class of moment matrices satisfying the tests of recursive generation recursive consistency and normal consistency the existence problem for minimal representing measures is reduced to the solubility of small systems of multivariable algebraic equations In a variety of applications including cases of the quartic moment problem $n=2$ the text includes explicit constructions of minimal representing measures via the theory of flat extensions Additional computational texts are used to prove non existence of representing measures or the non existence of minimal representing measures These tests are used to illustrate in very concrete terms new phenomena associated with higher dimensional moment problems that

do not appear in the classical one dimensional moment problem **Almost Automorphic and Almost Periodic Dynamics in Skew-Product Semiflows** Wenxian Shen, Yingfei Yi, 1998 This volume is devoted to the study of almost automorphic dynamics in differential equations By making use of techniques from abstract topological dynamics it is shown that almost automorphy a notion which was introduced by S Bochner in 1955 is essential and fundamental in the qualitative study of almost periodic differential equations **Special Functions, Partial Differential Equations, and Harmonic Analysis** Constantine Georgakis, Alexander M. Stokolos, Wilfredo Urbina, 2014-11-07 This volume of papers presented at the conference in honor of Calixto P Calder n by his friends colleagues and students is intended to make the mathematical community aware of his important scholarly and research contributions in contemporary Harmonic Analysis and Mathematical Models applied to Biology and Medicine and to stimulate further research in the future in this area of pure and applied mathematics
