will surely inspire more such praise for the author heralded by Publisher Weekly as America's foremost writer on marine research. Written with Ellis's deep knowledge and trademark passion, verve and wit, and illustrated with a wide array of images including his own signature artwork, his study covers the full spectrum of the sperm whale's existence from its prehistoric past to its current endangered existence. Ellis, as no one else can, illuminates the iconic impact of *Physeter macrocephalus*, the big-headed blower, on our history, environment, and culture, with a substantial nod to Herman Melville and *Moby Dick*, the great novel that put the sperm whale and whaling on the literary map. Ranging far and wide, Ellis covers the sperm whale's evolution, ecology, biology, anatomy, behavior, social organization, intelligence, communications, migrations, diet, and breeding. He also devotes considerable space to the whale's hunting prowess, including its clashes with the giant squid, and to the history of the whaling industry that decimated its numbers during the last two centuries. He even includes a story about a beached juvenile he helped rescue, an event that provided scientists with one of their first opportunities to observe a sperm whale in the water and up close. Offering a rich tapestry for anyone with an interest in the marvels of ocean life, Ellis's book provides an indispensable guide to the life and times of one of the planet's most intelligent, elusive, and endangered species.

Amazing Numbers in Biology Rainer Flindt, 2006-12-21. This book of tables provides comparative data from the fields of zoology, botany, microbiology, and human biology. Biology comes alive in this comprehensive and entertaining reference work. Warning: Anybody who begins browsing through this book will not easily stop reading.

Life and Times of a Big River Peter J. Marchand, 2015-04-15. When Richard Nixon signed the Alaska Native Claims Settlement Act in 1971, eighty million acres were flagged as possible national park land. Field expeditions were tasked with recording what was contained in these vast acres. Under this decree, five men were sent into the sprawling, roadless interior of Alaska, unsure of what they'd encounter and ultimately responsible for the fate of four thousand pristine acres. *Life and Times of a Big River* follows Peter J. Marchand and his team of biologists as they set out to explore the land that would ultimately become the Yukon-Charley Rivers National Preserve. Their encounters with strange plants, rare insects, and little-known mammals bring to life a land once thought to be static and monotonous. And their struggles to navigate and adapt to an unforgiving environment capture the rigorous demands of remote field work. Weaving in and out of Marchand's narrative is an account of the natural and cultural history of the area, as it relates to the expedition and the region's Native peoples. *Life and Times of a Big River* chronicles this riveting, one-of-a-kind journey of uncertainty and discovery, from a disparate and at one point desperate group of biologists.

The Greater and Lesser Apes and Human Evolution Dr. Madhab Chandra Dash. The greater and lesser apes play a crucial role in understanding human evolution, as they are our closest living relatives within the primate family. The lesser apes, such as gibbons and siamangs, are smaller, agile, and primarily tree-dwelling, while

the greater apes chimpanzees bonobos gorillas orangutans and humans are larger more intelligent and exhibit complex social behaviors Humans share about 98 99% of their DNA with chimpanzees and bonobos indicating a common ancestor that lived around 5 7 million years ago Lesser apes are small agile and mainly live in trees arboreal Greater apes are larger more intelligent and show complex social and emotional behavior Humans are classified as great apes and share about 98 99% of their DNA with chimpanzees and bonobos Humans and other apes share a common ancestor that lived about 5 7 million years ago Studying apes helps scientists understand human evolution including behavior intelligence and physical adaptations Humans did not evolve from modern apes but both groups evolved separately from a shared ancestor
