Information I. Masser, 2003-09-02 Modern geographic information systems technology has transformed spatial data handling capabilities and made it necessary for governments to rethink their roles with respect to the supply and availability of geographic information The nature of the relationship between governments and geographic information is explored in this book from a number of different conceptual positions with reference to the experiences of Britain the Netherlands Austria and the United States and particularly with respect to the development of national geographic information strategies The book examines the role that can be played both directly through a variety of policy initiatives and also indirectly because of the extent to which they create the broader institutional context within which these are developed and implemented The discussion is divided into three main parts The first of these considers what is Special About Geographic Information And Evaluates The Notion Of geographic information from four different standpoints as a resource a commodity an asset and an infrastructure The second part presents the findings from four case studies of national geographic information strategies while the final section evaluates these experiences with a view to identifying what general lessons can be learnt from them

Geographic Information Research Massimo Craglia, H. Couclelis, 2020-10-28 The contributors to this edited collection demonstrate that geographic information research is truly global in character cutting across a wide range of disciplines and addressing conceptual methodological technical ethical and political issues alike Of the six themes two are broadly concerned with data integration geographic data infrastructures GIS diffusion and implementation two are more technical and conceptual in nature generalisation concepts and paradigms and two reflect to a larger extent the application driven nature of GIS technology spatial analysis and multimedia Each section is introduced by chapters highlighting the key research issues Further chapters explore these issues in greater depth and benefit from the international collaboration Through the comparison of results included in this book the prospects for advancing the field and addressing the challenges of GIS research are greatly improved *GIS World Sourcebook*, 1996 **Geographical Information '97** Stuart

Hodgson, Massimo Rumor, Jan Jaap Harts, 1997 Geographical Information is essential for the layout planning and management of space and involves taxation cadastral data bases environmental policy water management maintenance and protection of pipeline systems terrain modelling and the making of maps The third European conference brought together some 300 speakers and authors from academia industry and government The resulting monumental work is representative for the state of the art of knowledge and information on Geographical Information *GIS* David R.
