

The background of the slide features a stylized graphic of a DNA double helix. The two strands of the helix are represented by thick, teal-colored lines that spiral around each other. Inside the loops of the helix, there are four human figures. Two of these figures are teal, matching the strands, and are positioned at the top and bottom of the visible loops. The other two figures are magenta and are positioned in the middle of the loops. The figures are simplified, with circular heads and rectangular bodies with outstretched arms.

Social Basis Of Scientific Discoveries:

The Social Basis of Scientific Discoveries Augustine Brannigan, 1981-10-29 What constitutes a scientific discovery How do discoveries happen and how are they recognised as such These are questions of central concern to scientists and philosophers In this book Augustine Brannigan provides a critical examination of the major theories which have been devised to account for discoveries and innovations in science and develops a fresh alternative Dr Brannigan begins by arguing that most theories fall into one of two classes mentalistic theories which describe how ideas come into the mind and cultural theories which describe how they mature in a particular culture His account reveals a series of empirical and methodological problems that make these existing models untenable and he proposes as an alternative a sociological approach which draws attention not to what makes discoveries happen but to the processes whereby certain achievements are recognised and labelled as discoveries This approach is illustrated in detail with a number of important scientific cases The book throws light not only on the conventional character of discoveries but also on the folk elements in popular theories about discovery such as genius gestalt switch and simultaneous invention

Discovery and Classification in Astronomy Steven J. Dick, 2013-09-09 Astronomical discovery involves more than detecting something previously unseen The reclassification of Pluto as a dwarf planet in 2006 and the controversy it generated shows that discovery is a complex and ongoing process one comprising various stages of research interpretation and understanding Ranging from Galileo's observation of Jupiter's satellites Saturn's rings and star clusters to Herschel's nebulae and the modern discovery of quasars and pulsars Steven J Dick's comprehensive history identifies the concept of extended discovery as the engine of progress in astronomy The text traces more than 400 years of telescopic observation exploring how the signal discoveries of new astronomical objects relate to and inform one another and why controversies such as Pluto's reclassification are commonplace in the field The volume is complete with a detailed classification system for known classes of astronomical objects offering students researchers and amateur observers a valuable reference and guide

Models of Discovery and Creativity Joke Meheus, Thomas Nickles, 2009-10-08 Since the origin of the modern sciences our views on discovery and creativity had a remarkable history Originally discovery was seen as an integral part of methodology and the logic of discovery as algorithmic or nearly algorithmic During the nineteenth century conceptions in line with romanticism led to the famous opposition between the context of discovery and the context of justification culminating in a view that banned discovery from methodology The revival of the methodological investigation of discovery which started some thirty years ago derived its major impetus from historical and sociological studies of the sciences and from developments within cognitive psychology and artificial intelligence Today a large majority of philosophers of science agrees that the classical conception as well as the romantic conception are mistaken Against the classical conception it is generally accepted that truly novel discoveries are not the result of simply applying some standardized procedure Against the romantic conception it is rejected that discoveries are

produced by unstructured flashes of insight An especially important result of the contemporary study concerns the availability of descriptive and normative models for explaining discoveries and creative processes Descriptive models mainly aim at explaining the origin of novel products normative models moreover address the question how rational researchers should proceed when confronted with problems for which a standard procedure is missing The present book provides an overview of these models and of the important changes they induced within methodology As appears from several papers the methodological study of discovery and creativity led to profound changes in our conceptions of justification and acceptance of rationality of scientific change and of conceptual change The book contains contributions from both historians and philosophers of science All of them however are methodological in the contemporary sense of the term The central values of this methodology are empirical accurateness clarity and precision and rationality The different contributions realize these values by their interdisciplinary nature Some philosophically oriented papers rely on historical case studies and results from the cognitive sciences others on recent results from the computer sciences and or non standard logics The historically oriented papers address central philosophical questions and hypotheses

Prematurity in Scientific Discovery Ernest B. Hook, 2002-10-02 In preparing this remarkable book Ernest Hook persuaded an eminent group of scientists historians sociologists and philosophers to focus on the problem why are some discoveries rejected at a particular time but later seen to be valid The interaction of these experts did not produce agreement on prematurity in science but something more valuable a collection of fascinating papers many of them based on new research and analysis which sometimes forced the author to revise a previously held opinion The book should be enthusiastically welcomed by all readers who are interested in how science works Stephen G Brush co author of *Physics The Human Adventure From copernicus to Einstein and Beyond*

Prematurity and Scientific Discovery contains interesting and insightful papers by numerous well known scientists and scholars It will be of wide interest not only to science studies scholars but also to working scientists and to science literate general readers Thomas Nickles editor of *Scientific Discovery Logic and Rationality*

Revisiting Discovery and Justification Jutta Schickore, Friedrich Steinle, 2006-04-18 The distinction between the contexts of discovery and justification has had a turbulent career in philosophy of science At times celebrated as the hallmark of philosophical approaches to science at times condemned as ambiguous distorting and misleading the distinction dominated philosophical debates from the early decades of the twentieth century to the 1980s Until today it informs our conception of the content domain and goals of philosophy of science It is due to this fact that new trends in philosophy of experimentation and history and sociology of science have been marginalized by traditional scholarship in philosophy To acknowledge properly this important recent work we need to re open the debate about the nature development and significance of the context distinction about its merits and flaws The contributions to this volume provide close readings and detailed analyses of the original textual sources for the context distinction They revise those accounts of forerunners of the distinction that have been written through the lens of Logical

Empiricism They map clarify and analyse the derivations and mutations of the context distinctions as we encounter them in current history and philosophy of science The re evaluation of the distinction helps us deal with the philosophical challenges that the New Experimentalism and historically socio politically and economically oriented science studies have placed before us This volume thus clears the ground for the productive and fruitful integration of these new developments into philosophy of science *Models and Concepts of Ideology* Jürgen Ritsert,2023-03-13 *The Sociology and Professionalization of Economics* A. W. Bob Coats,2005-08-17 A W Coats has made unique contributions to the history of economic thought economic methodology and the sociology of economics This volume collects together for the first time a substantial part of his work on the sociology and professionalization of economics **Cognitive Models of Science** Ronald N. Giere,1992

Data, Instruments, and Theory Robert John Ackermann,2014-07-14 Robert John Ackermann deals decisively with the problem of relativism that has plagued post empiricist philosophy of science Recognizing that theory and data are mediated by data domains bordered data sets produced by scientific instruments he argues that the use of instruments breaks the dependency of observation on theory and thus creates a reasoned basis for scientific objectivity Originally published in 1985 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 **Genesis** Jan Sapp,2003-09-11 Genesis The Evolution of Biology presents a history of the past two centuries of biology suitable for use in courses but of interest more broadly to evolutionary biologists geneticists and biomedical scientists as well as general readers interested in the history of science The book covers the early evolutionary biologists Lamarck Cuvier Darwin and Wallace through Mayr and the neodarwinian synthesis in much the same way as other histories of evolution have done bringing in also the social implications the struggles with our religious understanding and the interweaving of genetics into evolutionary theory What is novel about Sapp s account is a real integration of the cytological tradition from Schwann Boveri and the other early cell biologists and embryologists and the coverage of symbiosis microbial evolutionary phylogenies and the new understanding of the diversification of life coming from comparative analyses of complete microbial genomes The book is a history of theories about evolution genes and organisms from Lamarck and Darwin to the present day This is the first book on the general history of evolutionary biology to include the history of research and theories about symbiosis in evolution and first to include research on microbial evolution which were excluded from the classical neo Darwinian synthesis Bacterial evolution and symbiosis in evolution are also excluded from virtually every book on the history of biology
