

– при применении лазера во время операций и манипуляций в ране следует пользоваться специальными хирургическими инструментами с черной матовой поверхностью;

– нельзя оставлять лазер включенным после выполнения процедур.

Предупреждение пожаров и взрывов

За последние годы в связи с использованием в медицине довольно большого количества легковоспламеняющихся веществ, применением в отделке помещений пластика, оснащением отделения и операционных большим количеством электроаппаратуры увеличилась опасность возникновения в лечебных учреждениях пожаров.

Основными причинами возникновения пожаров являются:

– нарушения правил внутреннего распорядка;

– несоблюдение правил эксплуатации электрических приборов.

Все помещения стационара в настоящее время должны быть оборудованы автоматической системой оповещения о возгорании с выводом на пульт наблюдения в приемном отделении. Оповещение о пожаре на пульте осуществляется световым и звуковым сигналами.

Причиной возникновения пожара в палате может быть курение. Пепел или тлеющая сигарета падают на одежду больного, постельное белье, пол, мебель и легко могут привести к возгоранию. Поэтому курение в палатах должно быть категорически запрещено. Для курения необходимо выделить специальное место (чаще это туалет), оборудованное урнами с песком (ящиками) и огнетушителями.

В отделении нельзя пользоваться электронагревательными приборами (например, электрокипятильниками). Так как у больных и дежурного медицинского персонала часто возникает необходимость в приготовлении в вечернее или ночное время чая, кофе, администрация больницы должна обеспечить наличие в хирургическом отделении и безотказную работу специальной стационарной установки для быстрого кипячения питьевой воды и предусмотреть меры по предупреждению возгорания (невоспламеняющаяся столешница и др.).

Пожар в палате может возникнуть при неправильной эксплуатации прикроватных светильников. Необходимость в местном освещении постели больного не вызывает сомнений. Однако в многоместных палатах освещение с ненаправленным лучом часто мешает другим больным. Поэтому ухаживающие за больными (родственники или медицинские работники) при отсутствии на светильнике светонепроницаемого абажура часто накрывают его легко воспламеняющимся материалом (газетой, пленкой и т. д.), чего ни в коем случае нельзя делать.

Складирование легко воспламеняющихся предметов обихода (грязное белье, матрасы, подушки и т. д.) необходимо проводить в местах, не доступ-
