SSADM Version 4 John S. Hares, 1994-01-01      *Advanced Information Systems Engineering* Klaus R. Dittrich, Andreas Geppert, Moira C. Norrie, 2003-05-15 Since the late 1980s the CAiSE conferences have provided a forum for the presentation and exchange of research results and practical experiences within the field of Information Systems Engineering CAiSE 2001 was the 13th conference in this series and was held from 4th to 8th June 2001 in the resort of Interlaken located near the three famous Swiss mountains the Eiger Mönch and Jungfrau The first two days consisted of pre conference workshops and tutorials The workshop themes included requirements engineering evaluation of modeling methods data integration over the Web agent oriented information systems and the design and management of data warehouses Continuing the tradition of recent CAiSE conferences there was also a doctoral consortium The pre conference tutorials were on the themes of e business models and XML application development The main conference program included three invited speakers two tutorials and a panel discussion in addition to presentations of the papers in these proceedings We also included a special practice and experience session to give presenters an opportunity to report on and discuss experiences and investigations on the use of methods and technologies in practice We extend our thanks to the members of the program committee and all other referees without whom such conferences would not be possible The program committee whose members came from 20 different countries selected 27 high quality research papers and 3 experience reports from a total of 97 submissions The topics of these papers span the wide range of topics relevant to information systems engineering from requirements and design through to implementation and operation of complex and dynamic systems      Factoring Ethics in Technology, Policy Making, Regulation and AI Ali G. Hessami, Patricia Shaw, 2021-10-27 This book explores the ethical implications of the burgeoning adoption and deployment of Autonomous Decision Making and Algorithmic Learning Systems ADM ALS on human rights and societal values as well as these systems potential social harms and benefits After two millennia of recorded civilization consideration of ethics and social values in all that we strive for is a long overdue phenomenon Therefore this is a journey that we've just embarked on thanks to the emergence of ADM ALS and should not be treated as a destination in line with many other facets and emergent properties of products services and systems This book informs policymakers and practitioners about best practices in technology ethics pertinent to many disciplines and sectors      **Advanced Information Systems Engineering**, 2001

**Software Maintenance - A Management Perspective** Phaneendra Nath Vellanky, 2007-10-23 Computer systems play an important role in our society Software drives those systems Massive investments of time and resources are made in developing and implementing these systems Maintenance is inevitable It is hard and costly Considerable resources are required to keep the systems active and dependable We cannot maintain software unless maintainability characters are built into the products and processes There is an urgent need to reinforce software development practices based on quality and reliability principles Though maintenance is a mini development lifecycle it has its own problems Maintenance issues need

corresponding tools and techniques to address them Software professionals are key players in maintenance While development is an art and science maintenance is a craft We need to develop maintenance personnel to master this craft Technology impact is very high in systems world today We can no longer conduct business in the way we did before That calls for reengineering systems and software Even reengineered software needs maintenance soon after its implementation We have to take business knowledge procedures and data into the newly reengineered world Software maintenance people can play an important role in this migration process Software technology is moving into global and distributed networking environments Client server systems and object orientation are on their way Massively parallel processing systems and networking resources are changing database services into corporate data warehouses Software engineering environments rapid application development tools are changing the way we used to develop and maintain software Software maintenance is moving from code maintenance to design maintenance even onto specification maintenance Modifications today are made at specification level regenerating the software components testing and integrating them with the system Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems Software professionals have to maintain not only the software but the momentum of change in systems and software In this study we observe various issues tools and techniques and the emerging trends in software technology with particular reference to maintenance We are not searching for specific solutions We are identifying issues and finding ways to manage them live with them and control their negative impact
