

Chemical Changes Form New Substances

- A chemical change happens when substances are changed into new substances with different properties
- Example- When you bake a cake, you combine eggs, flour, sugar, and butter. Each ingredient has its own set of properties. When you mix the ingredients and bake them, you get something completely different, a cake, with different properties than any of the ingredients.

Clues to Chemical Change

- Chemical changes usually cause substances to change color, fizz, foam, bubble, heat, or produce sound, light, or an odor.

Can Chemical Changes Be Undone?

- Since new substances are formed during a chemical change, it is not easy to be undone
- Example- You cannot unbake a cake
