The First Discriminant Theory of Linearly Separable Data Shuichi Shinmura, 2024-04-12 This book deals with the first discriminant theory of linearly separable data LSD Theory3 based on the four ordinary LSD of Theory1 and 169 microarrays LSD of Theory2 Furthermore you can quickly analyze the medical data with the misclassified patients which is the true purpose of diagnoses Author developed RIP Optimal linear discriminant function finding the combinatorial optimal solution as Theory1 in decades ago that found the minimum misclassifications RIP discriminated 63 26 1 models of Swiss banknote 200 6 and found the minimum LSD basic gene set BGS In Theory2 RIP discriminated Shipp microarray 77 7129 which was LSD and had only 32 nonzero coefficients first Small Matryoshka SM1 Because RIP discriminated another 7 097 genes and found SM2 the author developed the Matryoshka feature selection Method 2 Program 3 that splits microarray into many SMs Program4 can split microarray into many BGSs Then the wide columnLSD Revolution 0 such as microarray np is found to have several Matryoshka dolls including SM up to BGS p Theory3 shows the surprising results of six ordinary data re analyzed by Theory1 and Theory2 knowledge Essence of Theory3 is described by using cephalopelvic disproportion CPD data RIP discriminates CPD data 240 19 and finds two misclassifications unique for cesarean and natural born groups CPD238 omitting two patients becomes LSD which is the first case selection method Program4 finds BGS 14 vars the only variable selection method for Theory3 32 25 models including BGS become LSD among 219 1 models Because Program2 confirms BGS has the minimum average error rate BGS is the most compact and best model satisfying Occam s Razor With this book physicians obtain complete diagnostic results for disease and engineers can become a true data scientist by obtaining integral knowledge of statistics and mathematical programming with simple programs **Applied Science & Technology**

**Index**, 2000 Probabilistic Finite Element Model Updating Using Bayesian Statistics Tshilidzi Marwala, Ilyes Boulkaibet, Sondipon Adhikari, 2016-09-23 Probabilistic Finite Element Model Updating Using Bayesian Statistics Applications to Aeronautical and Mechanical Engineering Tshilidzi Marwala and Ilyes Boulkaibet University of Johannesburg South Africa Sondipon Adhikari Swansea University UK Covers the probabilistic finite element model based on Bayesian statistics with applications to aeronautical and mechanical engineering Finite element models are used widely to model the dynamic behaviour of many systems including in electrical aerospace and mechanical engineering The book covers probabilistic finite element model updating achieved using Bayesian statistics The Bayesian framework is employed to estimate the probabilistic finite element models which take into account of the uncertainties in the measurements and the modelling procedure The Bayesian formulation achieves this by formulating the finite element model as the posterior distribution of the model given the measured data within the context of computational statistics and applies these in aeronautical and mechanical engineering Probabilistic Finite Element Model Updating Using Bayesian Statistics contains simple explanations of computational statistical techniques such as Metropolis Hastings Algorithm Slice sampling Markov Chain Monte Carlo

method hybrid Monte Carlo as well as Shadow Hybrid Monte Carlo and their relevance in engineering Key features Contains several contributions in the area of model updating using Bayesian techniques which are useful for graduate students Explains in detail the use of Bayesian techniques to quantify uncertainties in mechanical structures as well as the use of Markov Chain Monte Carlo techniques to evaluate the Bayesian formulations The book is essential reading for researchers practitioners and students in mechanical and aerospace engineering *Statistical Design and Analysis of Experiments*

Robert L. Mason, Richard F. Gunst, James L. Hess, 2003-04-25 Emphasizes the strategy of experimentation data analysis and the interpretation of experimental results Features numerous examples using actual engineering and scientific studies Presents statistics as an integral component of experimentation from the planning stage to the presentation of the conclusions Deep and concentrated experimental design coverage with equivalent but separate emphasis on the analysis of data from the various designs Topics can be implemented by practitioners and do not require a high level of training in statistics New edition includes new and updated material and computer output **Treatise on Water Science**, 2010-09-01

*Promoting Healthy Aging Across the Lifespan* Elena Carrillo-Alvarez, Miriam Rodriguez-Monforte, Jordi Vilaró, Katherine Simone McGilton, 2024-12-26 Worldwide there is a generalized trend toward aged societies Between 2015 and 2050 the proportion of the world s population over 60 years will nearly double from 12% to 22% As life expectancy continues to increase and natality rates lower not only the composition of countries will change but also its health landscape However an increased life expectancy does not necessarily mean a healthy life In most high income countries more than 20% of those years are lived in ill health due to chronic conditions caused by non communicable diseases which compromises functional ability and well being key components of healthy aging In this way not only people s lives but also societal structures are being affected Based on the life course approach to healthy aging aging starts from conception In this regard the promotion of healthy aging requires preventive strategies that enhance capacities during growth and development maintain them for as long as possible after maturity and slow down their rate of decline Moreover considering healthy aging across the lifespan entails focusing on different factors life opportunities and choices that might significantly influence health status lifestyle as well as health and social inequalities in older age and challenges the focus of most research on the topic which exclusively investigates the effect of influences operating in the later stages of life

**New Directions in Linear Acoustics and Vibration** Matthew Wright, Richard Weaver, 2010-07-26 Linear acoustics was thought to be fully encapsulated in physics texts of the 1950s but this view has been changed by developments in physics during the last four decades There is a significant new amount of theory that can be used to address problems in linear acoustics and vibration but only a small amount of reported work does so This book is an attempt to bridge the gap between theoreticians and practitioners as well as the gap between quantum and acoustic Tutorial chapters provide introductions to each of the major aspects of the physical theory and are written using the appropriate terminology of the acoustical community The book will act as a quick start guide to the new methods while providing a wide ranging introduction to the physical concepts

Application and Evaluation of Acupuncture in the Treatment of Neurological Diseases Liming Lu, Nenggui Xu, Myeong Soo Lee, Chunzhi Tang, Yong Tang, Bing Zhu, 2023-06-21 Neurological disorders such as Alzheimer s disease and Parkinson s disease are an important cause of disability and death

worldwide and pose a serious burden on the global health system over the past 30 years Acupuncture as the most widely used traditional Chinese medicine therapy in the world has been widely used in 183 countries and regions Acupuncture can treat more than 300 kinds of diseases especially for neurological diseases Due to the unique advantages of acupuncture such as good therapeutic effect and low side effects many researchers have conducted extensive clinical studies on the effectiveness and safety of acupuncture in the treatment of neurological diseases laying a foundation for the practicability and scientific vigor of this complementary and alternative therapeutic approach There are still many problems unanswered in the current clinical research on acupuncture for the treatment of neurological diseases First of all clinical research is lagging behind due to the lack of emphasis on modern advanced methods and analytical techniques e g artificial intelligence omics analysis bioinformatics analysis data mining and multidisciplinary integration process Secondly the quality of reports on most clinical studies of acupuncture treatment for neurological diseases is extremely low Most clinical studies have not adopted standardized methodological evaluations authoritative disease diagnosis standards and efficacy evaluation standards The lack of compliance regulations and strict study design reduces the accuracy and authenticity of the research Thirdly there is a lack of integrated assessment of the distribution of evidence for acupuncture treatment of neurological diseases Therefore strictly designed clinical research and in depth and systematic analysis method are currently needed to provide high quality evidence for acupuncture treatment of neurological diseases In this Research Topic we hope to further understand the role of acupuncture in the treatment of neurological diseases through clinical research and secondary research The range of acupuncture includes manual acupuncture electro acupuncture body needling auricular acupuncture scalp acupuncture laser acupuncture and acupressure etc Neurological diseases include stroke meningitis encephalitis tetanus Alzheimer s disease and other dementias Parkinson s disease epilepsy multiple sclerosis motor neurone disease migraine tense type headaches headaches from drug overuse and others
