Product Focused Software Process Improvement Frank Bomarius, Seija Komi-Sirviö, 2003-06-30 The Third International Conference on Product Focused Software Process Improvement PROFES 2001 continued the success of the PROFES 99 and PROFES 2000 conferences PROFES 2001 was organized in Kaiserslautern Germany September 10 13 2001 The PROFES conference has its roots in the PROFES Esprit project <http://www.ele.vtt.fi/profes> but it quickly evolved into a full fledged general purpose conference in 1999 and since then it has gained wide spread international popularity As in previous years the main theme of PROFES 2001 was professional software process improvement SPI motivated by product and service quality needs SPI is facilitated by software process assessment software measurement process modeling and technology transfer and has become a practical tool for quality software engineering and management The conference addresses both the solutions found in practice as well as relevant research results from academia The purpose of the conference is to bring to light the most recent findings and results in the area and to stimulate discussion between the researchers experienced professionals and technology providers for SPI

Software Architecture Patrick Donohoe, 1999-02-28 Software architecture is a primary factor in the creation and evolution of virtually all products involving software It is a topic of major interest in the research community where numerous formalisms processes and technologies are under development Architecture is also of major interest in industry because it is recognized as a significant leverage point for manipulating such basic development factors as cost quality and interval Its importance is attested to by the fact that there are several international workshop series as well as major conference sessions devoted to it The First Working IFIP Conference on Software Architecture WICSAI provided a focused and dedicated forum for the international software architecture community to unify and coordinate its effort to advance the state of practice and research WICSA 1 was organized to facilitate information exchange between practising software architects and software architecture researchers The conference was held in San Antonio Texas USA from February 22nd to February 24th 1999 it was the initiating event for the new IFIP TC 2 Working Group on Software Architecture This proceedings document contains the papers accepted for the conference The papers in this volume comprise

both experience reports and technical papers The proceedings reflect the structure of the conference and are divided into six sections corresponding to the working groups established for the conference Empirical Software Engineering Issues. Critical Assessment and Future Directions Victor Basili,Dieter Rombach,Kurt Schneider,Barbara Kitchenham,Dietmar Pfahl,Richard Selby,2007-06-11 This book constitutes the thoroughly refereed post proceedings of the International Dagstuhl Seminar on Empirical Software Engineering held in Dagstuhl Castle Germany in June 2006 The 54 revised full papers in this state of the art survey are organized in topical sections on the empirical paradigm measurement and model building technology transfer and education as well as roadmapping Learning Software Organizations. Calidad de Sistemas de Información. 4ª edición ampliada y actualizada Mario G. Piattini Velthuis, 2018-03-20 En la actualidad todas las organizaciones son en alguna manera empresas de software ya que la calidad de sus sistemas de información se ha convertido en uno de sus principales objetivos estratégicos y más que nunca su propia supervivencia depende de la calidad de los productos y servicios informáticos La industria del software tiene casi setenta años y en este período ha realizado grandes avances ya que disponemos de lenguajes de programación más sofisticados procesos de desarrollo más maduros y las aplicaciones que se construyen en la actualidad son más complejas Sin embargo la demanda de software por parte de la sociedad ha crecido más deprisa que la capacidad de la industria para producir software de calidad y de hecho la mala calidad de los sistemas informáticos ha costado mucho dinero y disgustos a los gobiernos y a las empresas La calidad de los Sistemas de Información viene condicionada por la calidad de las personas que crean desarrollan y los explotan la calidad de los proyectos que se utilizan para crear los sistemas los servicios y soportar los procesos de negocio y la calidad de los sistemas informáticos que a su vez dependen en buena parte de la calidad del software tanto de los procesos usados para su adquisición diseño implementación uso y mantenimiento como de los productos resultantes La presente obra reúne diferentes aspectos de calidad relacionados con estos distintos elementos ofreciendo una panorámica actual y completa sobre diversos modelos y estándares que se deben seguir para lograr sistemas de información de calidad combinando el rigor científico con la experiencia práctica

Dependable Systems II Rogério de Lemos,Cristina Gacek,Alexander Romanovsky,2004-10-22 As software systems become ubiquitous the issues of dependability become more and more critical Given that solutions to these issues must be taken into account from the very beginning of the design process it is appropriate that dependability is addressed at the architectural level This book results from an effort to bring together the research communities of software architectures and dependability Inspired by the ICSE 2003 Workshop on Software Architectures for Dependable Systems the book focuses on topics relevant to improving the state of the art in architecting dependable systems The 15 thoroughly reviewed papers originate partly from the workshop others were solicited in order to achieve complete coverage of all relevant aspects The papers are organized into topical sections on architectures for dependability fault tolerance in software architectures dependability analysis in software architectures and industrial experience *Medición de Software* Mario G. Software Product-Family Engineering Frank van der Linden, 2003-07-31 This book contains the proceedings of the Fourth International Workshop on Product Family Engineering PFE 4 held in Bilbao Spain October 3 5 2001 This workshop was the fourth in a series started in 1996 with the same subject software product family engineering Proceedings of the second and third workshops have been published as LNCS 1429 and LNCS 1951 The workshops were organized within co operation projects of European industry the first two by ARES Esprit IV 20 477 1995 1999 This project had three industrial and three academic partners and focused on software architectures for product families Some of the partners continued in ITEA project 99005 ESAPS 1999 2001 ITEA is the software development program 2023 within the European Eureka initiative ITEA projects last for two years and ESAPS was succeeded by CAFE ITEA ip00004 which started in 2001 and will terminate in 2003 This workshop was initially prepared within ESAPS and the preparation continued in CAFE Due to the attacks in the USA of September 11 several people were not able to fly and therefore did not show up However we have included their submissions in these proceedings The session chair presented these submissions and their inputs were used during the discussions It was planned that Henk Obbink be workshop chair and Linda Northrop and Sergio Bandinelli be co chairs However because of personal circumstances Henk Obbink was not able to leave home during the workshop Moreover both co chairs had already enough other duties Therefore the chairing duties were taken over by the program chair Frank van der Linden

Structure for Dependability: Computer-Based Systems from an Interdisciplinary Perspective Denis Besnard, Cristina Gacek, Cliff Jones, 2006-04-28 Computer based systems are now essential to everyday life They involve both technical hardware software components and human beings as active participants Whenever we fly aboard an aircraft or withdraw money from a cash point a combination of humans machines and software is supporting the delivery of the service These systems and many others benefit from the miniaturisation and cost reduction of the hardware which has made it possible for computers to be embedded everywhere An equally remarkable development is the software involved today systems are built which were literally unthinkable twenty or thirty years ago Measured in terms of their function the productivity of their creation has also advanced enormously largely because of the software infrastructure Even the dependability of the best of today's software is praiseworthy when one considers the complexity of the functionality provided Solid engineering and the increasing adoption of methods based on firmly established theory are to be thanked here However in large and complex systems there remain major challenges to achieving dependability when complex interactions exist between technical and human components Large and complex things are understood as assemblages of simpler components the way these components fit together is the structure of the system Structure can be real and physical or a subjective mental tool for analysis

Calidad de Sistemas de Información. 3ª edición ampliada y actualizada Mario G. Piattini Velthuis, La calidad de los sistemas de información se ha convertido en uno de los principales objetivos estratégicos de las organizaciones cuyos procesos más importantes y por

lo tanto su propia supervivencia dependen de la calidad de los productos y servicios informáticos. La industria del software tiene más de sesenta años y en este período ha realizado grandes avances ya que disponemos de lenguajes de programación más sofisticados y de procesos de desarrollo más maduros y las aplicaciones que se construyen en la actualidad son más complejas. Sin embargo, la satisfacción de los usuarios con los sistemas de información es muy desigual sobre todo si la comparamos con otros tipos de sistemas desarrollados por ingenieros más tradicionales. En efecto, la mala calidad de los sistemas informáticos no sólo ha costado mucho dinero a los organismos públicos y a las empresas sino que también es la responsable de varios desastres que se han cobrado vidas humanas. En la evolución experimentada por la calidad de los sistemas informáticos se ha pasado de un tratamiento centrado fundamentalmente en la inspección y detección de errores en los programas a una aproximación más sistémica. En los últimos años se han publicado diversos estudios marcos y estándares en los que se exponen los principios y las métricas que se deben seguir para la mejora de la calidad de los diferentes componentes de los sistemas informáticos: procesos, proyectos, productos, servicios, personas, etc. Esta obra trata todos estos aspectos ofreciendo una visión amplia sobre diferentes factores que se deben tener en consideración para la construcción de software de calidad. A lo largo de esta obra se ha combinado el rigor científico con la experiencia práctica proporcionando una panorámica actual y completa sobre la problemática asociada a la calidad de los sistemas informáticos.

Business Process Management Workshops Christoph Bussler, Armin Haller, 2006-03-02 This book constitutes the refereed post proceedings of six international workshops held in conjunction with the Third International Conference on Business Process Management BPM 2005 in September 2005. The 41 revised full papers presented were carefully reviewed and selected. Among the issues addressed are fundamental process modeling, Web service choreography and orchestration, business process reference models and business processes and services.
