J.A. Roth,J.A. Richt,I.A. Morozov,2013-04-18 Transboundary animal diseases TADs are a major threat to livestock They are highly contagious or transmissible and they have the potential to cause high morbidity and mortality in both susceptible animal populations and humans In addition not only are TADs detrimental to national economies they are also a serious threat to world food security This volume presents the proceedings of an international workshop on Vaccines and Diagnostics for Transboundary Animal Diseases that was held in Ames Iowa USA in 2012 Experts and scientists from academia industry and government reviewed the current status of vaccines and diagnostics for high priority TADs decision making and regulatory processes for veterinary biologics and the roles and responsibilities of government agencies The discussions also addressed achievements and gaps in vaccine and diagnostics development for 11 important TADs as well as the translation of research findings into licensed novel vaccines and diagnostics for high priority TADs      *Animal Genomics for Animal Health* Marie-Hélène Pinard,2008-01-01 It includes a review of the state of the art in animal genomics and its applications to animal health The contributions describe the new tools available such as HapMaps for chicken and cattle and show how the understanding of gene structure and function can be successfully applied to delineate the molecular mechanisms of disease and determine complex phenotypes associated with health traits A critical evaluation of future needs and future applications of animal genomics is also presented The integration of animal genomics in animal health research is likely to revolutionize the way scientists approach the challenges of discovering highly effective drugs and vaccines for animal diseases BOOK

episodes of avian influenza in different parts of the world and their consequences The publication aims at making recommendations to compare and improve the international procedures and standards related to the identification prevention control and elimination of AI epizootics as they are a threat to the livelihood of farmers especially in developing countries to public health as well as to national economies Chief veterinary officers animal health regulatory officials veterinarians poultry raising associations consumer associations specialised journalists and all those who need to understand and control AI episodes will benefit from reading this book

**Immunogenicity of Therapeutic Biological Products** Fred Brown,Anthony R. Mire-Sluis,2003 Immune responses to biological products have occurred with many approved therapeutics The proportion of patients mounting an immune response is product dependent and the clinical significance of the immune response also varies with the nature of the product Some products can induce production of significant levels of antibodies without any detectable effect on the activity of the product However neutralizing antibodies can attenuate the efficacy of the treatment and significant adverse clinical events can be seen if neutralizing antibodies cross react with patients endogenous proteins Prediction of immunogenicity includes the use of bio informatics to predict T cell epitopes T cell stimulation assays and in vivo transgenic animal models Approaches to prevent immunogenicity involve methods to design out immunogenic sequences protein pegylation and inducing tolerance Current methods for assessing and detecting immunogenicity include in vivo animal models antibody assays and biological assays The advantages and disadvantages of the various methods illustrate that a battery of tests is required to appropriately monitor patients immune responses during clinical trials

State of the Art Analytical Methods for the Characterization of Biological Products and Assessment of Comparability Anthony R. Mire-Sluis,2005 With the latest advances in analytical technologies most biological products can now be extensively characterized in terms of their identity heterogeneity and impurity profile The currently available analytical methods both physicochemical and biological can characterize the primary secondary and to some extent the higher order structure of proteins The sensitivity and selectivity of these methods allow for the identification and characterization not only of the desired protein component but also many product related substances and impurities as well as process related impurities present in the drug preparations Using an appropriate selection of analytical tools it may be possible to demonstrate physicochemical and functional comparability between protein products manufactured before and after a manufacturing change or during product development However the extent of demonstrable comparability depends on the tests used on the nature of the product and on the basic understanding of structure function relationships Assessment of immunogenicity is also a critical component of product characterization and is highly dependent on the types of assays used

*Process Validation for Manufacturing of Biologics and Biotechnology Products* Fred Brown,Anthony S. Lubiniecki,2003 Attempting to fill the gap Regulatory documents and inspections have put increasing emphasis on process validation for all types of products including biological and biotechnological ones Until now no description of a process validation for complex

biological processes exists let alone any concrete suggestion how to attain it this book however attempts to fill the gap Taking the current state of scientific practice in process validation as a starting point this volume portrays the expectations of the regulatory community and provides detailed examples of how various types of biological and biotechnological processes could be validated Considering the sizeable difficulties in designing a single method of process validation suitable for all types of processes and products the authors discuss the implications and present many possible routes to a successful validation process     Recombinant Vectors in Vaccine Development Fred Brown,1994 This volume explores the use of recombinant vectors in the development of new vaccines to benefit both human and animal health Emphasis is placed on bacterial and viral vectors and their applications     *Progress in Fish Vaccinology* Paul J. Midtlyng,2005 This volume gives a comprehensive update on recent developments in fish vaccinology and the potential and current use of vaccines in modern fish farming The book will be an indispensable aid and source of up to date information for fish health professionals managers in the aquaculture industry and industrial researchers working in the field of fish immunology vaccine development and disease control world wide Book Jacket
