good a prediction is in an absolute sense that matters but how good it is relative to the competition In other cases prediction is still a very rudimentary and dangerous science Silver observes that the most accurate forecasters tend to have a superior command of probability and they tend to be both humble and hardworking They distinguish the predictable from the unpredictable and they notice a thousand little details that lead them closer to the truth Because of their appreciation of probability they can distinguish the signal from the noise With everything from the health of the global economy to our ability to fight terrorism dependent on the quality of our predictions Nate Silver s insights are an essential read *The Latter-Day Saints' Millennial Star* ,1863 **General Revenue Sharing** United States.
