Abstract

The use of Geostatistics has become increasingly popular in recent decades in the context of agricultural sciences, representing an excellent innovation tool for rural producers and researchers who develop work in the most diverse agricultural cultures. This popularization is justified due to the optimization that Geostatistics brings to the production process, reducing unnecessary expenses on the part of the producer and mitigating negative impacts of agricultural activity on the environment. In this scenario, this article seeks to emphasize the use of Geostatistics in the context of sugarcane culture in Brazil, which represents the third largest agricultural crop with planted area in the country, seeking, through a systematic review, to highlight the importance of Geostatistics as a Precision Agriculture tool for this crop. To achieve this objective, we developed a systematic survey in important indexing bases of national and international scientific works, which made it possible to identify published works on the subject in Brazil, allowing the visualization of the regions where this innovative tool is being used. At the end of the review, it was possible to measure the current state of research with Geostatistics developed in sugarcane plantations throughout the Brazilian territory, which allowed us to conclude that there is a heterogeneity in the distribution of these researches, which can be explained by legal restrictions for the development of the culture in certain regions or the lack of better dissemination of research through journals with greater impact.

Soares, Roland Froidevaux, 2013-11-27 The Second European Conference on Geostatistics for Environmental Applications took place in Valencia November 18-20 1998 Two years have past from the first meeting in Lisbon and the geostatistical community has kept active in the environmental field In these days of congress

inflation we feel that continuity can only be achieved by ensuring quality in the papers For this reason all papers in the book have been reviewed by at least two referees and care has been taken to ensure that the reviewer comments have been incorporated in the final version of the manuscript We are thankful to the members of the scientific committee for their timely review of the scripts All in all there are three keynote papers from experts in soil science climatology and ecology and 43 contributed papers providing a good indication of the status of geostatistics as applied in the environmental field all over the world We feel now confident that the geoENV conference series seeded around a coffee table almost six years ago will march firmly into the next century
