comprehensive introductory text appropriate for new scholars Animal Studies An Introduction fills this deficiency providing the first holistic survey of the field **Animal Studies** G Saravanan,2013-03-01 ANIMAL STUDIES Experimental Procedures provides basic knowledge on animal studies The information such as handling of animals feeding housing surgery anaesthesia animal behavior and sample drawing are given in detail This book also illustrates the complete biochemical estimations in both serum and tissues of animals extensively for practical and research purposes **The Human Being, the World and God** Anne L.C. Runehov,2016-09-26 This book offers a philosophical analysis of what it is to be a human being in all her aspects It analyses what is meant by the self and the I and how this feeling of a self or an I is connected to the brain It studies specific cases of brain disorders based on the idea that in order to understand the common one has to study the specific The book shows how the self is thought of as a three fold emergent self comprising a relationship between an objective neural segment a subjective neural segment and a subjective transcendent segment It explains that the self in the world tackles philosophical problems such as the problem of free will the problem of evil the problem of human uniqueness and empathy It demonstrates how the problem of time also has its place here For many people the world includes ultimate reality hence the book provides an analysis and evaluation of different relationships between human beings and Ultimate Reality God The book presents an answer to the philosophical problem of how one could understand divine action in the world *Perturbation, Behavioural Feedbacks, and Population Dynamics in Social Animals* Daniel Oro,2020 In social animals perturbations may trigger specific behavioural responses with consequences for dispersal and complex population dynamics Perturbations raise the need for information gathering in order to reduce uncertainty and increase resilience Updated information is then shared within the group and social behaviours emerge as a self organized process This social information factoralizes with the size of the group and it is finally used for making crucial decisions about for instance when to leave the patch and where to go Indeed evolution has favoured philopatry over dispersal and this trade off is challenged by perturbations When perturbations accumulate over time they may decrease the suitability of the patch and erode the philopatric state until crossing a tipping point beyond which most individuals decide to disperse to better areas Initially the decision to disperse is led by a few individuals and this decision is copied by the rest of the group in an autocatalytic way This feedback process of social copying is termed runaway dispersal Furthermore social copying enhances the evolution of cultural and technological innovation which may cause additional nonlinearities for population dynamics Social information gathering and social copying have also occurred in human evolution especially after perturbations such as climate extremes and warfare In summary social feedback processes cause nonlinear population dynamics including hysteresis and critical transitions from philopatry to patch collapses and invasions which emerge from the collective behaviour of large ensembles of individuals
