ABSTRACT

Humans are the driving force in all activities on this earth, for this reason human individuality is an important point, to accelerate himself and hone his skills properly, in order to optimize his function as an individual creature. Besides that, because humans also live in society (Zoon Politicon) they must also contribute to the order of life of society and the state as mandated by the constitution, the existence of control and exploitation of natural resources that are fundamental to the life of the nation and state is carried out by the state, including energy natural resources that can be encouraging the growth and improvement of just law, as well as the application of new and renewable energy policies for sustainable development in Indonesia. Based on constitutional support and the need for a legal umbrella to protect new and renewable energy, it is necessary to regulate it comprehensively. This study aims to determine the application of new renewable energy policies for sustainable development. This research method uses a normative juridical research method with a case approach and statutory approach (statute approach). The implementation of new renewable energy policies for sustainable development shows that it has not been optimally implemented, especially in Indonesia, while Indonesia has the potential for large sources of new and renewable energy. However, utilization of this potential is still not maximized due to technological limitations and economic considerations. The business scheme and types of new renewable energy generators which are still small scale are not yet optimal, and the interconnection system is still limited. Therefore, the need for an important urgency in regulating the application of new and renewable energy policies for sustainable development must have a legal basis in its implementation.

Social Constraints On Energy Policy Implementation:

The Social Constraints on Energy-policy Implementation Max Neiman, Barbara J. Burt, 1983 Collection of essays on social implications economic implications and political aspects of energy policy in the USA in the light of a federal economic policy examines the impact of market structure and economic concentration on the use of alternative energy sources solar energy electric power etc discusses public opinion regarding energy conservation and the need to reduce power consumption because of increasing population density includes an economic analysis of petroleum and gas leasing schemes References

Energy Abstracts for Policy Analysis, 1984-07 **Perspectives on Management Capacity Building** Beth W. Honadle, Arnold M. Howitt, 1986-01-15 Perspectives on Management Capacity Building provides a lively spectrum of views on the problems and prospects of improving the management and performance of municipal governments in the United States Leading specialists in public administration probe the management needs of local governments and explore ways in which they can improve their capacity to manage Today state and local governments are caught in the transition between the expansionism of the post World War II years and the retrenchment era of the late seventies and eighties Improved management capacity has emerged as the most effective way for local governments to ride out the economic and political pressures confronting them This book first investigates the meaning of the term management capacity It then considers how management needs have changed in the post war period and how these needs vary among large cities suburbs and rural communities Two of the contributions explore the organizational politics of management improvement while others look at the functional areas of computers and financial management The book also addresses human resource problems such as labor relations management development and training of municipal legislators and concludes with several viewpoints on federal efforts to improve local management capacity Regulatory Choices Richard J. Gilbert, 2023-11-15 Regulatory Choices offers the first comprehensive economic history of energy policy and its consequences for California where some of the most innovative and far ranging programs of regulatory reform have originated The authors of this volume have gathered together an impressive wealth of material about actual policy decisions and their repercussions and have subjected their findings to astute economic analysis This book will serve for years to come as an invaluable reference on the costs and effects of various energy policies With its focus on bringing prices in alignment with the true cost of producing power and delivering it to the customer the first part of the book outlines the issue of setting utility rates and considers some of the proposals to provide regulated industries with incentives to respond to economic and environmental concerns The problems of energy supply occupy the second part of the book which includes a survey of the costs of alternative energy sources and estimates of their environmental impacts as well as a case study of the construction of the Diablo Canyon nuclear power plant The book concludes by documenting the results of subsidy programs that were designed to target the development of wind power and residential energy conservation Regulators we learn have a mixed record when it comes to managing the production of

energy Some conservation programs have enjoyed considerable economic success particularly those that correct a lack of consumer information Others such as the renewable energy tax credits or programs designed to subsidize new technologies have cost much more than the value of the energy they have saved What emerges clearly from this study is that regulated industries are not immune from the forces of competition This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1991 **Energy** Joseph Russell Rudolph,1995 A road map for the novice researcher contemplating the broad field affected by and concerned with energy Contemporary Issues in African Administration and Development Politics ,1990 **ERS Staff Report** ,1994 *Policy Studies Review* ,1985 Some vols include special issues Energy Policy Design in the Eastern Mediterranean Basin Bertug Ozarisoy,Hasim Altan,2023-09-28 This book explores energy consumption and thermal comfort in the social housing sector in the Eastern Mediterranean basin This book presents a novel methodological framework for the optimisation of post war social housing developments in the Eastern Mediterranean climate The authors draw on semi structured interviews to present evidence on in situ thermal sensation and provide the results of walk through and walk in thermographic surveys to highlight building fabric performance and highlight anomalies in the building envelopes The authors go on to show how this data informed retrofit design solution can be applied to reduce household energy consumption increase awareness of domestic energy use and inform effective policymaking decisions in energy use in the Eastern Mediterranean basin including the development of Energy Performance Certificate schemes This book will be of great interest to students and scholars of energy policy energy efficiency and planning It will also assist architects building engineers and other practitioners in closing the gap between the current understanding and the actual performance of existing residential building stocks in the Eastern Mediterranean basin Solar Energy Update ,1983-09
