Shelf Life Dominic Man, 2015-03-20 Shelf life a term recognised in EU UK food legislation may be defined as the period of time for which a food product will remain safe and fit for use provided that it is kept in defined storage conditions During this period the product should retain its desired sensory chemical physical functional and microbiological characteristics as well as accurately comply with any nutritional information printed on the label Shelf life therefore refers to a number of different aspects each food product has a microbiological shelf life a chemical shelf life and a sensory or organoleptic shelf life These categories reflect the different ways in which a food product will deteriorate over time Ultimately the shelf life of a food product is intended to reflect the overall effect of these different aspects Shelf life has always been an important facet of industrial food preparation and production as food and drink are often produced in one area and then distributed to other areas for retailing and consumption Globalised distribution and supply chains make it imperative that food should survive the

transit between producer and consumer as a perishable commodity food carries a high risk of spoilage. As such a realistic workable and reproducible shelf life has to be determined every time a new food product is developed and marketed. Shelf life determination of food has become an integral part of food safety, quality assurance, product development, marketing and consumer behaviour. Dominic Mans Shelf Life now in a revised and updated second edition encompasses the core considerations about shelf life. Section 1 introduces shelf life, describes its relationship to food safety and provides answers to the frequently asked questions around shelf life determination and testing which are a manager's chief concerns. Section 2 covers the science of the various ways in which food deteriorates and spoils including the physical, chemical and microbiological changes. Section 3 looks at shelf life in practice using case studies of different products to illustrate how shelf life may be determined in real life settings. This book will be invaluable to both practitioners and students in need of a succinct and comprehensive overview of shelf life concerns and topics.

Oxidation in Foods and Beverages and Antioxidant Applications Eric A Decker, Ryan J Elias, D. Julian McClements, 2010-09-27 Oxidative rancidity is a major cause of food quality deterioration leading to the formation of undesirable off flavours as well as unhealthful compounds. Antioxidants are widely employed to inhibit oxidation and with current consumer concerns about synthetic additives and natural antioxidants are of much interest. The two volumes of Oxidation in foods and beverages and antioxidant applications review food quality deterioration due to oxidation and methods for its control. The first volume focuses on oxidation mechanisms and antioxidant activity. Initial chapters in part one describe oxidation processes in foods including the role of metals, heme proteins and lipoxygenase. The impact of oxidation on food flavour and the health aspects of oxidized fats are also covered. Final chapters in part one review the measurement of the extent of lipid oxidation and methods for food shelf life determination. Part two discusses the ways in which antioxidants inhibit food oxidation factors affecting antioxidant efficacy, methods to measure antioxidant activity and novel antioxidants. With its distinguished international team of editors and contributors, the two volumes of Oxidation in foods and beverages and antioxidant applications is a standard reference for R & D and QA professionals in the food industry as well as academic researchers interested in food quality. Describes oxidation processes in foods including the role of metals, heme proteins and lipoxygenase. Reviews the impact of oxidation on food flavour and the health aspects of oxidized fats. Discusses the ways in which antioxidants inhibit food oxidation factors affecting antioxidant efficacy and methods to measure antioxidant activity.
