Stacs 89 6th Annual Symposium On Theoret:

STACS 90 Christian Choffrut, Thomas Lengauer, 1990-02-07 The Symposium on Theoretical Aspects of Computer Science is organized jointly by the Special Interest Group for Applied Mathematics of AFCET Association Française de Cybernétique Economique et Technique and the Special Interest Group for Theoretical Computer Sciences of GI Gesellschaft für Informatik. It is held alternately in France and in Germany. This volume contains two invited papers on combinatorial methods in computer science and on the complexity of local optimization and 24 contributions on theoretical aspects of computer science. Some software systems are presented showing the possibilities of applying theoretical research to the realization of software tools.

Annual Symposium on Theoretical Aspects of Computer Science, 1998 **STACS 89** B. Monien, Robert Cori, 1989 This volume contains the presentations of the Sixth Symposium on Theoretical Aspects of Computer Science. STACS 89 held at the University of Paderborn February 16-18 1989. In addition to papers presented in the regular program, the volume contains abstracts of software systems demonstrations which were included in this conference series in order to show applications of research results in theoretical computer science. The papers are grouped into the following thematic sections: computational geometry, automata theory and formal languages, semantics of programming languages, parallel algorithms, graph algorithms, complexity structures, fault tolerance, completeness, distributed computing and concurrency.

STACS 98 Michel Morvan, Christoph Meinel, Daniel Krob, 1998-02-18 This book constitutes the strictly refereed proceedings of the 15th Annual Symposium on Theoretical Aspects of Computer Science. STACS 98 held in Paris, France, in February 1998. The volume presents three invited surveys together with 52 revised full papers selected from a total of 155 submissions. The papers are organized in topical sections on algorithms and data structures, logic, complexity and automata and formal languages.

Combinatorics on Traces Volker Diekert, 1990-09-12 The construction of a software system is a task that has to be structured to ensure that the software product fulfills all expectations and the process of producing it remains manageable and reliable. Mathematical methods including logic algebra and functional calculus are needed to support structuring and provide notations and basic formal concepts for the foundations of software engineering. Mathematical methods of programming reflect the need for modularization and abstraction and suggest appropriate goal-directed procedures for the construction of software programs. This volume contains the proceedings of an International Summer School held at Marktoberdorf in 1990, the 11th in a series on mathematical methods in programming. Outstanding scientists contributed papers centered around logical and functional calculi for the specification, refinement and verification of programs and program systems and remarkable examples for the formal development of proofs and algorithms are given.

STACS 2007 Wolfgang Thomas, 2007-02-08 This book constitutes the refereed proceedings of the 24th Annual Symposium on Theoretical Aspects of Computer Science. STACS 2007 held in Aachen, Germany, in February 2007. The 56 revised full papers presented together with 3 invited papers were carefully reviewed and selected from about 400

submissions The papers address the whole range of theoretical computer science including algorithms and data structures automata and formal languages complexity theory logic in computer science semantics specification and verification of programs rewriting and deduction as well as current challenges like biological computing quantum computing and mobile and net computing

STACS 96 Claude Puech,Rüdiger Reischuk,1996-02-14 This book constitutes the refereed proceedings of the 13th Symposium on Theoretical Aspects of Computer Science STACS 96 held in Grenoble France in February 1996 The 52 revised papers presented were selected from a total of 185 submissions also included are three invited papers The volume addresses all current aspects of theoretical computer science and is organized in sections on complexity theory automata theory parallel algorithms learning parallel and distributed systems cryptography logic and database theory algorithms semantics and program verification and communication complexity

The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a masterful and gripping novel that will keep you speculating until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.
