The Science of Alpine Ski Racing is the first book to discuss the science coaching research and training of elite to recreational alpine ski racers for optimal performance. This book brings together the complex physiological, biomechanical, and technical components of the sport in a practical manner with which coaches and researchers alike can adopt to elicit better performance outcomes for athletes. Literature of this kind has never been formally researched and published specifically for the sport of alpine ski racing, making it both unique and a cornerstone to the discipline. Backed by cutting edge research, the book provides practical guidance on preparing athletes for high performance and understanding the core tenets of sports science underpinning it, striking a balance between the complex theoretical and practical components coaches and athletes must prepare for in alpine ski racing. Accessibly written and featuring contributions from world leading experts, The Science of Alpine Ski Racing covers key topics of health, training, and high performance in the sport and will be vital reading for youth coaches, professional ski instructors, strength and conditioning coaches, and sports science staff associated with winter sports programs, as well as applied researchers looking for a model to apply to other sports.

An evidence-based scientific understanding of factors determining Olympic winter sports performance, recent changes in training content and methods, the improvement in technology, as well as the occurrence of injury and illness is required. On one hand, this would provide the

opportunity to translate research to practice On the other hand to guide the practice of Olympic winter sports with the ultimate goal of improving the performance Certainly the continued evolution of Olympic winter sports has contributed to an enormous accumulation of knowledge evidence and relevant training technologies Sports sciences including physiology conditioning nutrition biomechanics coaching psychology as well as sport technology history and social sciences have much to contribute to the preparation of the athletes in the Olympic winter sports Consequently this Research Topic sought to provide a platform of contributions to set out a comprehensive framework of the components that should be addressed when developing training plans leading to elite Olympic winter sports performance Overall the papers were all directed toward a better understanding of physiological biomechanical and training factors related to different Olympic winter sports disciplines cross country skiing alpine skiing biathlon Nordic combined speed skating snowboarding and ski cross
