of dieting The dieting industry makes it seem like losing weight is some sort of rocket science a top secret combination of special foods eaten in special ways and all kinds of expensive superfoods fitness fads and embarrassing celebrity endorsements And so it's understandable that when someone seems to stay slender it must obviously be because they're just naturally that way By accident even We assume some special innate characteristics mean they get to run circles around the laws of physics eat junk food and end up with flat abs and a bum you can bounce coins off The truth though Nobody is naturally thin In fact when somebody claims to be naturally one way or the other naturally slim or just naturally bigger without anything they can do about it what they are actually telling you is that they have a lifestyle that naturally leads to either a healthy weight or overweight Nobody can fight the laws of physics but people are born with different temperaments different life philosophies and different attitudes toward food Look at a thin person and what's likely the cause is that they think about food differently and because they do they behave differently when they eat This guide will help you to Transform your entire relationship with food Gradually lose weight and keep it off for the rest of your life Let go of magic pills shakes and other stuff the dieting industry colleagues and that skinny YouTube chick want you to believe in Explore and understand why you eat when you're body isn't hungry Take responsibility to love respect and nourish your body And much more
