Sockeye The Life Of A Pacific Salmon:

Sockeye Roger A. Caras, 1975 Pacific Salmon Life Histories Cornelis Groot, L. Margolis, 1991 Pacific salmon are an important biological and economic resource of countries of the North Pacific rim They are also a unique group of fish possessing unusually complex life histories There are seven species of Pacific salmon five occurring on both the North American and Asian continents sockeye pink chum chinook and coho and two masu and amago only in Asia The life cycle of the Pacific salmon begins in the autumn when the adult female deposits eggs that are fertilized in gravel beds in rivers or lakes The young emerge from the gravel the following spring and will either migrate immediately to salt water or spend one or more years in a river or lake before migrating Migrations in the ocean are extensive during the feeding and growing phase covering thousands of kilometres After one or more years the maturing adults find their way back to their home river returning to their ancestral breeding grounds to spawn They die after spawning and the eggs in the gravel signify a new cycle Upon this theme Pacific salmon have developed many variations both between as well as within species Pacific Salmon Life Histories provides detailed descriptions of the different life phases through which each of the seven species passes Each chapter is written by a scientist who has spent years studying and observing a particular species of salmon Some of the topics covered are geographic distribution transplants freshwater life ocean life development growth feeding diet migration and spawning behaviour The text is richly supplemented by numerous maps illustrations colour plates and tables and there is a detailed general index as well as a useful geographical index *Pacific Salmon & their Ecosystems* Deanna J. Stouder, Peter A. Bisson, Robert J. Naiman, 2012-02-02 The symposium Pacific Salmon and Their Ecosystems Status and Future Options and this book resulted from initial efforts in 1992 by Robert J Naiman and Deanna J Stouder to examine the problem of declining Pacific salmon *Oncorhynchus* spp Our primary goal was to determine informational gaps As we explored different scientific sources state provincial and federal agencies as well as non profit and fishing organizations we found that the information existed but was not being communicated across institutional and organizational boundaries At this juncture we decided to create a steering committee and plan a symposium to bring together researchers managers and resource users The steering committee consisted of members from state and federal agencies non profit organizations and private industry see Acknowledgments for names and affiliations In February 1993 we met at the University of Washington in Seattle to begin planning the symposium The steering committee spent the next four months developing the conceptual framework for the symposium and the subsequent book Our objectives were to accomplish the following 1 assess changes in anadromous Pacific Northwest salmonid populations 2 examine factors responsible for those changes and 3 identify options available to society to restore Pacific salmon in the Northwest The symposium on Pacific Salmon was held in Seattle Washington January 10 12 1994 Four hundred and thirty five people listened to oral presentations and examined more than forty posters over two and a half days We made a deliberate attempt to draw in speakers and attendees from outside the Pacific Northwest *Pacific*
