Damiani, Mauro Madravio, 2012-12-06 Soft computing is playing an increasing role in the study of complex systems in science and engineering. There is a large spectrum of successful applications of soft computing in very different applications domains such as aerospace communication consumer appliances electric power systems process engineering transportation and manufacturing automation and robotics. It has taken a while to bring the early ideas of soft computing to an area and a discipline that seems to be more than appropriate for that. Here it is. This book studies SOFT computing in SOFTWARE engineering environment. The book is HARD in terms of its results. It covers a range of core topics from software engineering that are soft from its very nature: selection of components, software design, software reuse, software cost estimation and software processes. Soft computing differs from conventional hard computing in its ability to be tolerant of imprecision, uncertainty, partial truth and approximation. The guiding principle of soft computing is: Exploit the tolerance for imprecision, uncertainty, partial truth and approximation to achieve tractability, robustness and low solution cost. The role model for soft computing is the human mind. This seems to be a natural fit with software engineering, a human based development activity based on sound engineering principles. A recent survey by researchers reveals that Software Engineering research tends to be quite self contained, not relying on other disciplines for its thinking. *Soft Computing for Information Processing and Analysis* Masoud Nikravesh, Lotfi A. Zadeh, 2006-07-02 Search engines with Google at the top have become the most heavily used online service with millions of searches performed every day and many remarkable capabilities. *Soft Computing for Information Processing and Analysis* includes reports from the front of soft computing in the internet industry and imparts knowledge and understanding of the significance of the field's accomplishments, new developments and future directions.  interactive fuzzy interval reasoning for smart web shopping fuzzy scheduling and logistic An essential feature of economic
 and financial problems is that there are always at least two criteria to be taken into account profit maximization and risk
 minimization Therefore the economic and financial problems are multiple criteria ones In this book a new systematization of
 the problems of multiple criteria decision making is proposed which allows the author to reveal unsolved problems The
 solutions of them are presented as well and implemented to deal with some important real world problems such as
 investment projects evaluation tool steel material selection problem stock screening and fuzzy logistic It is well known that
 the best results in real world applications can be obtained using the synthesis of modern methods of soft computing
 Therefore the developed by the author new approach to building effective stock trading systems based on the synthesis of
 fuzzy logic and the Dempster Shafer theory seems to be a considerable contribution to the application of soft computing
 method in economics and finance An important problem of capital budgeting is the fuzzy evaluation of the Internal Rate of
