,1998      Advancements in Model-Driven Architecture in Software Engineering Rhazali, Yassine,2020-09-18 An integral element of software engineering is model engineering They both endeavor to minimize cost time and risks with quality software As such model engineering is a highly useful field that demands in depth research on the most current approaches and techniques Only by understanding the most up to date research can these methods reach their fullest potential

Advancements in Model Driven Architecture in Software Engineering is an essential publication that prepares readers to exercise modeling and model transformation and covers state of the art research and developments on various approaches for methodologies and platforms of model driven architecture applications and software development of model driven architecture modeling languages and modeling tools Highlighting a broad range of topics including cloud computing service oriented architectures and modeling languages this book is ideally designed for engineers programmers software designers entrepreneurs researchers academicians and students      Handbook of Research on the Role of Human Factors in IT Project Management Misra, Sanjay,Adewumi, Adewole,2019-09-27 The role humans play in the field of information technology continues to hold relevance even with the industry s rapid growth People contribute heavily to the physical cognitive and organizational domain of computing yet there is a lack of exploration into this phenomenon Humanoid aspects of technology require extensive research in order to avoid marginalization and insufficient data The Handbook of Research on the Role of Human Factors in IT Project Management is a collection of innovative research on the methods and applications of the task of human characteristics in the design and development of new technology While highlighting topics including digitalization risk management and task analysis this book is ideally designed for IT professionals managers support executives project managers managing directors academicians researchers and students seeking current research on the dynamics of human influence in technological projects      *Software Engineering Education in the Modern Age* Paola Inverardi,Mehdi Jazayeri,2006-12-15 This tutorial book presents an augmented selection of the material presented at the Software Engineering Education and Training Track at the International Conference on Software Engineering ICSE 2005 held in St Louis MO USA in May 2005 The 12 tutorial lectures presented cover software engineering education state of the art and practice creativity and rigor challenges for industries and academia as well as future directions      **Algebraic Specification Techniques and Tools for Software Development** Ingo Classen,Hartmut Ehrig,Dietmar Wolz,1993 The intention of this book is to show how algebraic specification methods can be used for software development to support reliability modifiability and reusability These methods are introduced by parameterized and module specifications through practical examples and case studies using algebraic specification languages and tools developed at TU Berlin      **The British National Bibliography** Arthur James Wells,2009      *From Requirements to Java in a Snap* Michał Śmiałek,Wiktor Nowakowski,2015-01-14 This book provides a coherent methodology for Model Driven Requirements Engineering which

stresses the systematic treatment of requirements within the realm of modelling and model transformations. The underlying basic assumption is that detailed requirements models are used as first class artefacts playing a direct role in constructing software. To this end the book presents the Requirements Specification Language RSL that allows precision and formality which eventually permits automation of the process of turning requirements into a working system by applying model transformations and code generation to RSL. The book is structured in eight chapters. The first two chapters present the main concepts and give an introduction to requirements modelling in RSL. The next two chapters concentrate on presenting RSL in a formal way suitable for automated processing. Subsequently chapters 5 and 6 concentrate on model transformations with the emphasis on those involving RSL and UML. Finally chapters 7 and 8 provide a summary in the form of a systematic methodology with a comprehensive case study. Presenting technical details of requirements modelling and model transformations for requirements, this book is of interest to researchers, graduate students and advanced practitioners from industry. While researchers will benefit from the latest results and possible research directions in MDRE, students and practitioners can exploit the presented information and practical techniques in several areas including requirements engineering, architectural design, software language construction and model transformation. Together with a tool suite available online, the book supplies the reader with what it promises: the means to get from requirements to code in a snap.

**Machine Learning Applications In Software Engineering** Du Zhang, Jeffrey J P Tsai, 2005-02-21. Machine learning deals with the issue of how to build computer programs that improve their performance at some tasks through experience. Machine learning algorithms have proven to be of great practical value in a variety of application domains. Not surprisingly, the field of software engineering turns out to be a fertile ground where many software development and maintenance tasks could be formulated as learning problems and approached in terms of learning algorithms. This book deals with the subject of machine learning applications in software engineering. It provides an overview of machine learning, summarizes the state of the practice in this niche area, gives a classification of the existing work and offers some application guidelines. Also included in the book is a collection of previously published papers in this research area. *Computer Science and Its Applications* Abdelmalek Amine, Ladjel Bellatreche, Zakaria Elberrichi, Erich J. Neuhold, Robert Wrembel, 2015-05-12. This book constitutes the refereed proceedings of the 5th IFIP TC 5 International Conference on Computer Science and Its Applications CIIA 2015 held in Saida, Algeria, in May 2015. The 56 revised papers presented were carefully reviewed and selected from 225 submissions. The papers are organized in the following four research tracks: computational intelligence, security and network technology, information technology and software engineering. **ECEL 2016 - Proceedings of the 15th European Conference on e-Learning**, Proceedings of the 15th European Conference on e-Learning ECEL 2016. *Trustworthy Cyber-Physical Systems Engineering* Alexander Romanovsky, Fuyuki Ishikawa, 2016-10-03. From the Foreword: Getting CPS dependability right is essential to forming a solid foundation for a world that increasingly depends on such systems. This book
