Soho Mission:

The SOHO Mission Bernhard Fleck, Vicente Domingo, Arthur I. Poland, 2012-12-06 SOHO the Solar and Heliospheric Observatory is a project of international cooperation between ESA and NASA to study the Sun from its deep core to the outer corona and the solar wind To achieve its scientific goals it carries a complement of twelve sophisticated state of the art instruments Three helioseismology instruments are expected to provide unique data for the study of the structure and dynamics of the solar interior from the very deep core to the outermost layers of the convection zone A set of five complementary remote sensing instruments consisting of EUV and UV imagers spectrographs and coronagraphs will give us our first comprehensive view of the outer solar atmosphere and corona leading to a better understanding of the enigmatic coronal heating and solar wind acceleration processes Finally three experiments will complement the remote sensing observations by making in situ measurements of the composition and energy of the solar wind and charged energetic particles This volume contains detailed descriptions of all the twelve instruments on board SOHO Also included are an overview paper and a description of the SOHO ground system science operations and data products The aim of these papers is to make the broader scientific community and in particular potential guest investigators aware of the scientific objectives and capabilities of the SOHO payload and to provide a reference document for the various instruments Third

The STEREO Mission C.T. Russell, 2008-07-18 C T Russell Originally published in the journal Space Science Reviews Volume 136 Nos 1 4 DOI 10 1007 s11214 008 9344 1 Springer Science Business Media B V 2008 The Sun Earth Connection is now an accepted fact It has a significant impact on our daily lives and its underpinnings are being pursued vigorously with missions such as the Solar Terrestrial Relations Observatory commonly known as STEREO This was not always so It was not until the middle of the nineteenth century that Edward Sabine connected the 11 year geomagnetic cycle with Heinrich Schwabe's deduction of a like periodicity in the sunspot record The clincher for many was Richard Carrington's sighting of a great white light arc on the Sun on September 1 1859 followed by a great geomagnetic storm 18 hours later But was the Sun Earth Connection significant to terrestrial denizens Perhaps in 1859 it was not but a century later it became so Beginning in the 1930 s as electrical power grids grew in size power companies began to realize that they occasionally had power blackouts during periods of intense geomagnetic activity This correlation did not appear to be sufficiently significant to bring to the attention of the public but during the International Geophysical Year IGY when geomagnetic activity was being scrutinized intensely the occurrence of a large North American power blackout during a great magnetic storm was impossible to ignore **The Coronas-F**

Anderson, 2014-06-03 Based on years of research conducted at the NASA Jet Propulsion Laboratory Low Energy Lunar Trajectory Design provides high level information to mission managers and detailed information to mission designers about low energy transfers between Earth and the moon The book answers high level questions about the availability and performance of such transfers in any given month and year Low energy lunar transfers are compared with various other types of transfers and placed within the context of historical missions Using this book designers may reconstruct any transfer described therein as well as design similar transfers with particular design parameters An Appendix Locating the Lagrange Points and a useful list of terms and constants completes this technical reference Surveys thousands of possible trajectories that may be used to transfer spacecraft between Earth and the moon including transfers to lunar libration orbits low lunar orbits and the lunar surface Provides information about the methods models and tools used to design low energy lunar transfers Includes discussion about the variations of these transfers from one month to the next and the important operational aspects of implementing a low energy lunar transfer Additional discussions address navigation station keeping and spacecraft systems issues **The Sun from Space** Kenneth R. Lang, 2013-04-18 Our familiar but often inscrutable star exhibits a variety of enigmatic phenomena that have continued to defy explanation Our book begins with a brief account of these unsolved mysteries Scientists could not for example understand how the Sun's intense magnetism is concentrated into dark sunspots that are as large as the Earth and thousands of times more magnetic Nor did they know exactly how the magnetic fields are generated within the Sun for no one could look inside it Another long standing mystery is the million degree solar atmosphere or corona that lies just above the cooler visible solar disk or photosphere Heat should not emanate from a cold object to a hotter one anymore than water should flow up hill Researchers have hunted for the elusive coronal heating mechanism for more than half a century The Sun's hot and stormy atmosphere is continuously expanding in all directions creating a relentless solar wind that seems to blow forever The exact sources of the wind's components and the mechanisms of its acceleration to supersonic velocities also remained perplexing problems The relatively calm solar atmosphere can be violently disrupted by powerful explosions filling the solar system with radio waves X rays and gamma rays and hurling charged particles out into space at nearly the speed of light
