important and crucial step in deriving information on natural resources including soils resources is discussed. An introduction to soils as a natural body with respect to their formation, physical and chemical properties used during inventory of soils and soil classification is given in Chapter 5. The spectral response patterns of soils including hyperspectral characteristics fundamental to deriving information on soils from spectral measurements and the techniques of soil resources mapping are discussed in chapter 6 and 7 respectively. Furthermore, the creation of digital soil resources database and the development of soil information systems, a very important aspect of storage and dissemination of digital soil data to the end users, are discussed in chapter 8. Lastly, the applications of remote sensing techniques in soil moisture estimation and soil fertility evaluation are covered in chapter 9 and 10 respectively.

**The Soils of Nepal** Roshan Babu Ojha, Dinesh Panday, 2021-10-14. This book publishes consolidated information on the soils of Nepal from all possible sources. The Survey Department, Government of Nepal, conducted two national scale soil survey projects to classify soils of Nepal: Land Resource Mapping Project ended in 1985 and National Land Use Planning Project ended in 2021. Both projects adopted the United States Department of Agriculture system of soil classification. Besides National Soil Science Research Center, previously known as Soil Science Division of Nepal Agricultural Research Council and Soil Management Directorate, Department of Agriculture also worked on soils of Nepal. To date, the information on the soils of Nepal is not published in well-documented form but has been reported widely as gray literature: project report, government report, or peer review articles. *The Soils of Nepal* is a part of World Soils Book Series which constitutes twelve chapters covering broad aspects such as soil research history, climate, geology, soil classification and mapping, and soil fertility. Furthermore, information about soil properties and relation between soil constituents of the dominant soil types of Nepal and their scope of use in the context of land use are described. This book also tries to simplify the intricate relationship among soil, culture, and people. Each chapter contains a comprehensive, richly illustrated, and up-to-date overview of the soils of Nepal. We believe it fulfils a quest for a global audience including students, educators, extension workers, and soil scientists who are interested to know the young soils of Nepal.
