Observations and Predictions of Eclipse Times by Early Astronomers J.M. Steele, 2013-04-17 Eclipses have long been seen as important celestial phenomena whether as omens affecting the future of kingdoms or as useful astronomical events to help in deriving essential parameters for theories of the motion of the moon and sun This is the first book to collect together all presently known records of timed eclipse observations and predictions from antiquity to the time of the invention of the telescope In addition to cataloguing and assessing the accuracy of the various records which come from regions as diverse as Ancient Mesopotamia China and Europe the sources in which they are found are described in detail Related questions such as what type of clocks were used to time the observations how the eclipse predictions were made and how these prediction schemes were derived from the available observations are also considered The results of this investigation have important consequences for how we understand the relationship between observation and theory in early science and the role of astronomy in early cultures and will be of interest to historians of science astronomers and ancient and medieval historians Advances in Solar Research at Eclipses from Ground and from Space Jean-Paul Zahn, Magda

Stavinschi, 2012-12-06 The aim of this Advanced Study Institute was to give an account on the most recent results obtained in solar research Bucharest was chosen to host it because the capital city of Romania was located right in the middle of the totality path of the last eclipse of the millennium on 11th August 1999 furthermore the phenomenon was close to reach there its longest duration 2m 23s Such a total eclipse is not only a very spectacular event which draws the crowds to astronomers solar eclipses still offer the best conditions for observing the lower part of the corona The Sun plays a crucial role in our very existence It was responsible for the formation of the Earth and rendered this planet fit to host living beings providing the right amount of heat and this for a long enough span of time Quite understandably it has always been a prime target of human curiosity and more recently one of scientific investigation During the last century it was realized that the Sun is a star like billions of others we learned since that it draws its energy from the nuclear fusion of hydrogen and we are now able to estimate its age and life expectancy *The Sun Recorded Through History* J.M. Vaquero, M. Vázquez, 2009-04-21 The Sun is nowadays observed using different techniques that provide an almost instantaneous 3 D map of its structure Of particular interest is the study of the variability in the solar output produced by the dissipation of magnetic energy on different spatial and temporal scales the so called magnetic activity The 11 year cycle is the main feature describing this phenomenon Apart from its intrinsic scientific interest this topic is worth studying because of the interaction of such processes with the terrestrial environment A fleet of space and ground based observatories are currently monitoring the behaviour of our star on a daily basis However solar activity varies not only on this decadal time scale as has been attested mainly through two methods a records of the number of sunspots observed on the solar surface from 1610 and b the records of ^{14}C and ^{10}Be cosmogenic isotopes such as ^{14}C and ^{10}Be measured in tree rings and ice cores respectively The study of the long term behaviour of solar activity may be

comp mented by the study of historical accounts describing phenomena directly or indirectly related to solar activity Numerous scienti c and non scienti c d uments have reported these events and we can make use of them as a proxy of solar activity in past times *Atlas of Historical Eclipse Maps* F. Science and Technology in Korean History □□□, 2005 Originally this book was published in Korea under the title *Were There Sciences in Korean History* in Korean The author selected two dozen topics from the history of science in Korea to present a survey of Korean science to the general public Now this is translated into English for international readers with slight modifications to the original Korean version This is author s way of interpreting Korea s proud scientific traditions as well as his interpretations of why Korea had to be late in the introduction of advanced Western sciences in the nineteenth century and thereafter hopefully for the better understanding of Korean history for the general readers as much as professional historians *The Story of Eclipses* George Frederick Chambers, 1909 [Rewriting Early Chinese Texts](#) Edward L. Shaughnessy, 2006-06-01 *Rewriting Early Chinese Texts* examines the problems of reconstituting and editing ancient manuscripts that will revise indeed rewrite Chinese history It is now generally recognized that the extensive archaeological discoveries made in China over the last three decades necessitate such a rewriting and will keep an army of scholars busy for years to come However this is by no means the first time China s historical record has needed rewriting In this book author Edward L Shaughnessy explores the issues involved in editing manuscripts rewriting them both today and in the past The book begins with a discussion of the difficulties encountered by modern archaeologists and paleographers working with manuscripts discovered in ancient tombs The challenges are considerable these texts are usually written in archaic script on bamboo strips and are typically fragmentary and in disarray It is not surprising that their new editions often meet with criticism from other scholars Shaughnessy then moves back in time to consider efforts to reconstitute similar bamboo strip manuscripts found in the late third century in a tomb in Jixian Henan He shows that editors at the time encountered many of the same difficulties faced by modern archaeologists and paleographers and that the first editions

produced by a court appointed team of editors quickly prompted criticism from other scholars of the time Shaughnessy concludes with a detailed study of the editing of one of these texts the Bamboo Annals Zhushu jinian arguably the most important manuscript ever discovered in China Showing how at least two different competing editions of this text were produced by different editors and how the differences between them led later scholars to regard the original edition the only one still extant as a forgery Shaughnessy argues for this text s place in the rewriting of early Chinese history

The History of Science and Technology in the Spring and Autumn Period and the Warring States Period Li Shi, The book is the volume of The History of Science and Technology in the Spring and Autumn Period and the Warring States Period among a series of books of Deep into China Histories. The earliest known written records of the history of China date from as early as 1250 BC from the Shang dynasty c. 1600–1046 BC and the Bamboo Annals 296 BC describe a Xia dynasty c. 2070–1600 BC before the Shang, but no writing is known from the period. The Shang ruled in the Yellow River valley, which is commonly held to be the cradle of Chinese civilization. However, Neolithic civilizations originated at various cultural centers along both the Yellow River and Yangtze River. These Yellow River and Yangtze civilizations arose millennia before the Shang. With thousands of years of continuous history, China is one of the world's oldest civilizations and is regarded as one of the cradles of civilization. The Zhou dynasty 1046–256 BC supplanted the Shang and introduced the concept of the Mandate of Heaven to justify their rule. The central Zhou government began to weaken due to external and internal pressures in the 8th century BC, and the country eventually splintered into smaller states during the Spring and Autumn period. These states became independent and warred with one another in the following Warring States period. Much of traditional Chinese culture, literature, and philosophy first developed during those troubled times. In 221 BC, Qin Shi Huang conquered the various warring states and created for himself the title of Huangdi, or emperor of the Qin, marking the beginning of imperial China. However, the oppressive government fell soon after his death and was supplanted by the longer-lived Han dynasty 206 BC–220 AD. Successive dynasties developed bureaucratic systems that enabled the emperor to control vast territories directly. In the 21 centuries from 206 BC until AD 1912, routine administrative tasks were handled by a special elite of scholar-officials. Young men well-versed in calligraphy, history, literature, and philosophy were carefully selected through difficult government examinations. China's last dynasty was the Qing 1644–1912, which was replaced by the Republic of China in 1912 and in the mainland by the People's Republic of China in 1949. Chinese history has alternated between periods of political unity and peace and periods of war and failed statehood, the most recent being the Chinese Civil War 1927–1949. China was occasionally dominated by steppe peoples, most of whom were eventually assimilated into the Han Chinese culture and population. Between eras of multiple kingdoms and warlordism, Chinese dynasties have ruled parts or all of China. In some eras, control stretched as far as Xinjiang and Tibet, as at present. Traditional culture and influences from other parts of Asia and the Western world, carried by waves of immigration, cultural assimilation, expansion, and foreign contact, form the basis of the modern culture of China.
