**Abstract:** Herein, we developed the first photochemical reaction set-up under solid-state conditions using a resonant acoustic mixer (RAM), a novel mechanochemical methodology that eliminates the need for milling media. This innovation outperforms previous approaches in the ball mill under avoidance of milling balls and their related disadvantages. Further, it enables the facile performance and up-scaling of photochemical reactions up to a factor of ten. We investigate the influences of liquid and solid additives on the rheology and performance of two model reactions and demonstrate and compare the efficiency and applicability of two custom-designed photoreactors.

## Introduction

Light is one of the most environment-friendly activation modes, being both renewable and waste-free. However, conventional photochemical reactions suffer from sustainability issues, as they are often performed in highly diluted solutions due to the poor penetration depth of photons which results in substantial waste production.<sup>[1,2]</sup> Owing to the global incentives towards environmentally friendly synthesis alternatives, research on solvent-free pathways is increasing.<sup>[3-6]</sup> Nonetheless, typical photochemical approaches in the solid-state are performed on glass plates suffering from poor diffusion and requiring small sample batches. Mechanochemistry is an alternative solid-state synthesis strategy capable of overcoming these disadvantages. Mechanochemical synthesis describes the performance of chemical reactions under the impact of mechanical energy avoiding bulk solvents,<sup>[3-6]</sup> providing greener and more efficient reactions,<sup>[7-12]</sup> and also opening the pathways towards otherwise inaccessible products.<sup>[13,14]</sup> Next to the limited amount of publications on combining photochemistry and ball milling,<sup>[15-22]</sup> our working group has recently addressed the challenge by designing translucent quartz glass milling vials, opening up the opportunities for photochemical reactions with higher energy UVC light.<sup>[23-26]</sup> This innovation has overcome a major hurdle that enables efficient photochemical organic transformations without the use of metal catalysts and bulk solvents.<sup>[17,24]</sup> While these milling vessels are suitable for use with soft milling media made from polymers, quartz glass is not resistant to harder materials. In mechanochemistry, the usage of ball mills often

B: General scheme of model reaction, photochemical phosphonation reaction of 4-iodotoluene (1a) with triethyl phosphite, reaction conditions if not stated otherwise: 0.38 mmol 1a, 3 eq.  $\text{P}(\text{OEt})_3$ , 2 eq.  $\text{Ca}_2\text{CO}_3$ , 1 g  $\text{SiO}_2$ , and DMSO ( $\eta=0.3$ ) were mixed in a 1.4 mL quartz glass tube at 60 g in the RAM for 3 h under ambient air conditions and constant irradiation of 12 UVC-LEDs ( $\lambda=272$  nm) in PR1. C: Investigation of the influence of liquid additives including, left: amount ( $\eta$ ) of DMSO and right equivalents of  $\text{P}(\text{OEt})_3$  in dependency of the total amount of liquid. D: Influence of solid additives, green line indicates the yield under previously optimized conditions. E: Kinetic investigation of the phosphonation reaction of 4-iodotoluene (1eq.) under optimized conditions using 3eq.  $\text{P}(\text{OEt})_3$ , 1.2 g  $\text{K}_3\text{PO}_4$ , DMSO ( $\eta=1$ ) were mixed under ambient air conditions in the RAM at 60 g for 1 h under irradiation using PR1 followed by 1 h in the dark. The process was repeated until full conversion of the substrate to the product was achieved. Corresponding conversions were determined by  $^1\text{H-NMR}$  spectroscopy by analyzing a small amount of the crude reaction mixture.

Advances in Metal Carbene Chemistry U. Schubert, 1989-04-30 There are only few topics in organometallic chemistry which have stimulated research activities in as many areas as transition metal carbene alkylidene complexes About 25 years after the first planned synthesis of a carbene complex in E O Fischer's laboratory in Munich the NATO Advanced Research Workshop on Transition Metal Carbene Complexes was the first meeting which brought together scientists from different disciplines to discuss inorganic organic theoretical structural catalysis related aspects of metal carbene chemistry The 70th birthday of Professor E O Fischer was a good occasion for this enterprise The organizers of the meeting K D Dotz Marburg F R Kreibitz Munchen U Schubert Wurzburg were encouraged by the fact that most of the leading scientists in this area were able to participate in the workshop The very high standard of the contributions is reflected in this book which contains papers from the majority of the participants The Proceedings show the state of the art in metal carbene chemistry and will hopefully be a landmark in the development of this area of chemistry Generous financial support for the workshop and for the preparation of this book was provided by the Scientific Affairs Division of NATO and some companies The organizers also acknowledge the efforts of the staff of the Bildungs zentrum der Hans Seidel Stiftung in Wild bad Kreuth for creating a pleasant and stimulating atmosphere during the conference

principles of photochemistry with a short discussion on absorption spectra and related absorbing structures as well as on the general nature of photochemical reactions in solutions The following information covers how proteins nucleic acids viruses and their basic structures are chemically and physically affected when exposed to visible radiation and ultraviolet light The book explains that the site of action of the ultraviolet light when applied to proteins in a small active center shows that other parts of the protein are also affected considered as an energy transfer Then the general conclusions pertaining to the physicochemical and chemical changes in nucleic acids through directed radiation doses that are big enough to induce modifications are enumerated The text further explains that the physicochemical modifications which occur when proteins are irradiated can accompany loss in enzyme activity The kinetics of inactivation of dry enzymes is compared to the photochemistry of enzymes in a solution The inactivation of viruses is important as the process of replication can cause some formed viruses to spread in its environment worsening the state of infection Hence the problem which components in a biological system absorb effective radiation is analyzed The book is suitable for microbiologists microchemists and laboratory researchers and scientists dealing with infectious diseases
