

Solid Wastes and Residues

Conversion by Advanced
Thermal Processes

Waste-to-Energy (WtE) plants are designed to convert solid waste into energy, typically in the form of electricity or heat. These plants use various technologies, including incineration, gasification, and pyrolysis, to break down waste materials and generate energy. WtE plants are often used as a means of waste management, particularly for municipal solid waste (MSW), and can provide a significant source of renewable energy.

WtE plants are designed to handle a wide range of waste materials, including household waste, industrial waste, and agricultural waste. The process typically involves the following steps: 1. Waste collection and transport to the plant. 2. Sorting and preprocessing of the waste. 3. Incineration or other thermal process to generate energy. 4. Energy conversion and distribution. 5. Waste residue management, including landfills or recycling.
