Suns Surface And Subsurface Investigating Shape And Irradiance:

The Sun's Surface and Subsurface Jean-Pierre Rozelot, 2008-01-11 Composed of a set of lectures and tutorial reviews this book stems from a summer school devoted to the gravitational aspects of the sun and their geophysical consequences Contributions elaborate on the gravitational distortions of the sun which can be used to gain some knowledge of the sun's interior and surface phenomena but which also influences the sun's irradiance and thus ultimately the earth's climate Last but not least it is shown that these small distortions constitute a formidable challenge to solar astrometry and the final part of the book describes the observational difficulties in defining unequivocally the solar diameter *Solar Dynamics and Magnetism from the Interior to the Atmosphere* Nagi N. Mansour, Alexander G. Kosovichev, Rudolf Komm, Dana Longcope, 2013-12-03 Discusses recent advances and new problems in the exploration of the Sun's interior structure solar dynamics and dynamo mechanisms of sunspot and active regions formation sources of solar irradiance variations and links between the subsurface dynamics flaring and CME activity NASA's Solar Dynamics Observatory SDO mission has provided a large amount of new data on solar dynamics and magnetic activities during the rising phase of the current and highly unusual solar cycle These data are complemented by the continuing SOHO mission and by ground based observatories that include the GONG helioseismology network and the New Solar Telescope Also the observations are supported by realistic numerical simulations on supercomputers This unprecedented amount of data provides a unique opportunity for multi-instrument investigations that address fundamental problems of the origin of solar magnetic activity at various spatial and temporal scales This book demonstrates that the synergy of high resolution multi-wavelength observations and simulations is a key to uncovering the long standing puzzles of solar magnetism and dynamics This volume is aimed at researchers and graduate students active in solar physics and space science Originally published in Solar Physics journal Vol 287 1 2 2013
