## **The Drifting Sands:**

The Drifting Sands Elsie Lee, 1966      *The Plough that Broke the Steppes* David Moon, 2013-02-28 This is the first environmental history of Russia's steppes. From the early eighteenth century settlers moved to the semi arid but fertile grasslands from wetter forested regions in central and northern Russia and Ukraine and from central Europe. By the late nineteenth century they had turned the steppes into the bread basket of the Russian Empire and parts of Europe. But there was another side to this story. The steppe region was hit by recurring droughts, winds from the east whipped up dust storms, the fertile black earth suffered severe erosion, crops failed and in the worst years there was famine. David Moon analyses how naturalists and scientists came to understand the steppe environment including the origins of the fertile black earth. He also analyses how scientists tried to understand environmental change including climate change. Farmers and the scientists who advised them tried different ways to deal with the recurring droughts: planting trees, irrigation and cultivating the soil in ways that helped retain scarce moisture. More sustainable, however, were techniques of cultivation to retain scarce moisture in the soil. Among the pioneers were Mennonite settlers. Such approaches aimed to work with the environment rather than trying to change it by planting trees or supplying more water artificially. The story is similar to the Dust Bowl on the Great Plains of the USA which share a similar environment and environmental history. David Moon places the environmental story of the steppes in the wider context of the environmental history of European colonialism around the globe.      Transactions of the Connecticut Academy of Arts and Sciences, 1907 Vol 15 To the University of Leipzig on the occasion of the five hundredth anniversary of its foundation from Yale University and the Connecticut Academy of Arts and Sciences 1909      **The Netherlands and the Dutch** Eduardo F. J. De Mulder, Ben C. De Pater, Joos C. Droogleevers Fortuijn, 2018-07-28 This book presents a geographical survey of the Netherlands reviewing recent and historic developments that made the nation. It is a relatively wealthy country and the Dutch belong to the happiest and healthiest on earth. But these qualities are not evenly spread over the country. The urban agglomeration of Randstad Holland in the west hosts most of the nation's capital and young, well educated people, whereas older and less educated people are concentrated in the peripheral areas in the north east and south. Interactions between physical and human geographical aspects of the Netherlands are described quite extensively. Its position on one of Europe's most prominent deltas, its abundance of energy resources and the course of history have all contributed to its present national position and international networks. But early and recent Dutch have also shaped this country. They reclaimed lakes and shallow seas, protected the lowlands against floods, re-allotted land parcels and designed and developed urban areas. Besides its focus on water related topics, the book also covers social and cultural aspects. The book also discusses future challenges and offers scenarios for solutions. This is a book for those interested in a wide variety of recent aspects of the geography of the Netherlands described in a historical context. It appeals to students and researchers of many disciplines in geography, urban and landscape planning, water management, history and cultural studies.
