Compressed Earth Block & Rammed Earth Structures B. V. Venkatarama Reddy, 2022-02-11 The book focuses on low carbon construction materials such as stabilised compressed earth blocks CEB's and rammed earth RE The content has been divided into four broad themes which includes an introduction to earth construction stabilised earth stabilised compressed earth blocks and masonry stabilised rammed earth and energy carbon emissions sustainability and case studies It provides basic introduction to earthen materials and earthen structures particularly with reference to the contemporary work on stabilised earth products for structural applications in buildings The illustrations in the form of graphs tables and photographs help the reader to get a grip over the CEB and RE construction The book illustrates many case studies and examples of CEB and RE buildings The knowledge on structural characteristics of CEB and RE especially with reference to the durability of such earthen products and the structural design aspects is uniquely dealt The embodied energy embodied carbon and the impact on construction sector touching upon sustainability of buildings is another unique feature of the book This volume will be a useful guide for the research community teachers engineers architects building professionals practicing engineers students and individuals aspiring to build low carbon and sustainable buildings

Environmental Deterioration of Materials A. Moncmanová, 2007 The increasing level of pollution in the environment not only harms the natural world but

also accelerates the deterioration and corrosion of materials used in technical work as well as objects with historical or artistic value. It is impossible to eliminate the numerous sources of this negative effect so there are currently increased efforts towards improved preservation which require a thorough knowledge of the causes of the degradation of individual materials. This book deals with the fundamental principles underlying environmental degradation of widely used and economically important construction materials such as metals, stone, brick, concrete, timber, cast iron, steel, copper alloys and aluminium. It features information on the methods of deterioration as well as general information on the economic impact of the damaging processes and offers some suggested fundamental protection techniques for buildings, industrial and agricultural facilities, monuments and culturally important structures. This book will be of interest to materials and corrosion engineering experts, civil and environmental engineers, students and practicing professionals, designers, architects and restoration engineers. It will also be a useful tool for managers from various sectors of industry, for auditors of environmental management systems and it can be used as a complementary course book for university students.
