This New Ocean William E. Burrows, 2010-09-29 It was all part of man's greatest adventure landing men on the Moon and sending a rover to Mars finally seeing the edge of the universe and the birth of stars and launching planetary explorers across the solar system to Neptune and beyond The ancient dream of breaking gravity's hold and taking to space became a reality only because of the intense cold war rivalry between the superpowers with towering geniuses like Wernher von Braun and Sergei Korolyov shelving dreams of space travel and instead developing rockets for ballistic missiles and space spectacles Now that Russian archives are open and thousands of formerly top secret U S documents are declassified an often startling new picture of the space age emerges the frantic effort by the Soviet Union to beat the United States to the Moon was doomed from the beginning by gross inefficiency and by infighting so treacherous that Winston Churchill likened it to dogs fighting under a carpet there was more than science behind the United States suggestion that satellites be launched during the International Geophysical Year and in one crucial respect Sputnik was a godsend to Washington the hundred odd German V 2s that provided the vital start to the U S missile and space programs legally belonged to the Soviet Union and were spirited to the United States in a derring do operation worthy of a spy thriller despite NASA's claim that it was a civilian agency it had an intimate relationship with the military at the outset and still does a distinction the Soviet Union never pretended to make constant efforts to portray astronauts and cosmonauts as Boy Scouts were often contradicted by reality the Apollo missions to the Moon may have been an unexcelled political triumph and feat of exploration but they also created a headache for the space agency that lingers to this day This New Ocean is based on 175 interviews with Russian and American scientists and engineers on archival documents including formerly top secret National Intelligence Estimates and spy satellite pictures and on nearly three decades of reporting The impressive result is this fascinating story the first comprehensive account of the space age Here are the strategists and war planners engineers and scientists politicians and industrialists astronauts and cosmonauts science fiction writers and journalists and plain ordinary unabashed dreamers who wanted to transcend gravity's shackles for the ultimate ride The story is written from the perspective of a witness who was present at the beginning and who has seen the conclusion of the first space age and the start of the second

Planetary Dreams Robert Shapiro, 2008-05-02 The Quest To Discover Life Beyond Earth The dreams that I write of are not the usual ones the images that come up in our minds involuntarily during certain stages of sleep but rather the hopes and expectations that we have lavished upon other worlds around us from the Preface The surprisingly long history of debate over extraterrestrial life is full of marvelous visions of what life out there might be like as well as remarkable stories of alleged sightings and heated disputes about the probability that life might actually have arisen more than once In Planetary Dreams acclaimed author Robert Shapiro explores this rich history of dreams and debates in search of the best current answers to the most elusive and compelling of all questions Are we alone In his pursuit he presents three contrasting views regarding how life might have started through Divine Creation by a highly unlikely stroke of luck or by the inevitable process of a natural law that he terms the Life Principle We are treated to a lively fictional dinner debate among the leading proponents of these schools of thought with the last named group arguing that life

has almost surely formed in many places throughout the universe and the others that life may well be entirely unique to our own blue planet To set the stage for a deep exploration of the question the author then leads us on a fantastic journey through the museum of the cosmos an imagined building that holds models of the universe at different degrees of magnification We then journey deep into inner space to view the astonishingly intricate life of a single cell and learn why the origin of such a complex object from simple chemical mixtures poses one of the most profound enigmas known to science Writing in a wonderfully entertaining style Shapiro then reviews the competing theories about the start of life on Earth and suggests the debate may best be settled by finding signs of life on the other worlds of our solar system He takes us on a guided tour of the most likely sites from the underground hot springs of Mars to the ice covered oceans of Jupiter's airless moons Along the way he shares a wealth of fascinating stories about the ways in which our views of the heavens have changed from the theories of ancient philosophers who argued that the Moon was inhabited to the current Origins and Astrobiology initiatives of NASA He describes the probes that will be sent out in the near future in pursuit of the first compelling physical evidence of life beyond Earth and concludes with a radical suggestion about how this quest might be supported through the next millennium As we launch into an exciting new era of space exploration Planetary Dreams offers a thoughtful and entertaining exploration of both the history of our hopes and expectations and a vision of a possible future in which the discovery of life elsewhere will provide a new view of our place in the universe
