Geology of Volcanic Rocks in the South Half of the Ishpeming Greenstone Belt, Michigan Theodore J.

Bornhorst,Rodney C. Johnson,Geological Survey (U.S.),1993 The south half of the Ishpeming greenstone belt is dominated by a thick succession of subaqueously erupted volcanic rocks A regional structural interpretation of the belt provides a framework for placing this succession in a stratigraphic order The south half of the Ishpeming greenstone belt preserves the remnants of overlapping subaqueous volcanic complexes within an arc system The Kitchi Formation as redefined herein comprises the lower half of the volcanic succession and is subdivided into three informal units The basal basalt flow unit is composed of pillowed tholeiitic basalt flows and minor banded iron formation and dacitic tuff It is overlain by the second and third units which are tuff and lahar volcanic debris flow units that interfinger with one another These units range in composition from calc alkalic basalt to dacite The Kitchi Formation represents an evolving tholeiitic mafic shield to calc alkalic mafic to felsic subaqueous volcano The Mona Formation which is redefined herein is in structural contact with the Kitchi Formation but is likely younger It is subdivided into three informal units The base consists of a basalt flow unit which

is composed of pillowed tholeiitic to magnesium rich basalt flows and minor amounts of banded iron formation and tuff. The basalt is overlain by a calc-alkalic dacite to rhyolite lapilli tuff unit and a laterally continuous upper tuff unit of calc-alkalic basalt to andesite. The Mona Formation represents an evolving tholeiitic mafic shield to mafic felsic calc-alkalic mafic to felsic subaqueous volcano. The Deer Lake Peridotite, an ultramafic sill complex that intrudes the Kitchi Formation, is speculatively interpreted as a subvolcanic ultramafic komatiite base of the Mona Formation.

Geological Atlas of Africa Thomas Schlüter, 2008-04-19. This atlas is intended primarily for anybody who is in some background for the arrangement of how the interested in basic geology of Africa. Its originality lies in that the atlas was done. The second chapter is devoted to the regional geology of each African country or territory, reviewed country by country, with maps for a fuller appreciation of why this work in Africa is and text a view normally not presented in textbooks worth doing. Chapter 3 provides an executive summary of regional geology. It is my belief that there has long been a need in universities and geological surveys worldwide in the context of no political boundaries both in Africa and in the developed world for such a summary. The main part of the atlas lies in Chapter 4 where, in summarizing geological maps and an accompanying basic alphabetical order of each African country or territory, text utilising the enormous fund of knowledge that is presented by a digitized geological overview map has been accumulated since the beginning of geological and an accompanying text on its respective stratigraphical research in Africa in the mid 19th century. I hope that tectonics, economic geology, geohazards, and that in part the present atlas may satisfy this need. Geosites. A short list of relevant references is also added.
