The Dinosauria:

The Dinosauria, Second Edition David B. Weishampel, Peter Dodson, Halszka Osmólska, 2004-12-06 When the *The Dinosauria* was first published more than a decade ago it was hailed as the best scholarly reference work available on dinosaurs and an historically unparalleled compendium of information. This second fully revised edition continues in the same vein as the first but encompasses the recent spectacular discoveries that have continued to revolutionize the field. A state of the science view of current world research, the volume includes comprehensive coverage of dinosaur systematics, reproduction and life history, strategies, biogeography, taphonomy, paleoecology, thermoregulation and extinction. Its internationally renowned authors, forty-four specialists on the various members of the Dinosauria, contribute definitive descriptions and illustrations of these magnificent Mesozoic beasts. The first section of *The Dinosauria* begins with the origin of the great clade of these fascinating reptiles, followed by separate coverage of each major dinosaur taxon, including the Mesozoic radiation of birds. The second part of the volume navigates through broad areas of interest. Here we find comprehensive documentation of dinosaur distribution through time and space, discussion of the interface between geology and biology, and the paleoecological inferences that can be made through this link. This new edition will be the benchmark reference for everyone who needs authoritative information on dinosaurs.

Evolution: the Grand Experiment Dr. Carl Werner, Carl Werner, 2007

Darwin's book on evolution admitted that intermediate links were perhaps the most obvious and serious objection to the theory of evolution. Darwin recognized that the fossils collected by scientists prior to 1859 did not correspond with his theory of evolution, but he predicted that his theory would be confirmed as more and more fossils were found. One hundred and fifty years later, *Evolution: The Grand Experiment* critically examines the viability of Darwin's theory.

Osteology of the Carnivorous Dinosauria in the United States National Museum Charles Whitney Gilmore, 1920

Osteology of the Armored Dinosauria in the United States National Museum Charles Whitney Gilmore, 1914 The present paper proposed to give for the first time a detailed account of the osteological structure of *Stegosaurus* to be followed by systematic descriptions of all the type specimens of that genus and other armored dinosaur remains contained in the United States National Museum collections. With one exception the present work is based entirely upon National Museum material, the exception being a specimen generously loaned by Mr. W. H. Reed of the University of Wyoming and described here as a new type species.
