The Gordian Knot Political Gridlock On The Information Highway:

The Gordian Knot W. Russell Neuman, Richard Jay Solomon, Lee W. McKnight, 1999-07-26 Veterans of the high definition TV wars of the 1980s the authors social scientists as well as technologists came to see themselves as chroniclers and students of an intriguing and serious techno economic conflict Why they asked did so few understand the rules of the game In a broad account accessible to generalist and specialist alike they address the current national debate about the development of a national information infrastructure locating the debate in a broad historical narrative that illuminates how we got here and where we may be going and outlining a bold vision of an open communications infrastructure that will cut through the political gridlock that threatens this information highway Technical change the authors argue is creating a new paradigm that fits neither the free market nor regulatory control models currently in play They detail what is wrong with the political process of the national information infrastructure policy making and assess how different media systems telecommunications radio television broadcasting were originally established spelling out the technological assumptions and organizational interests on which they were based and showing why the old policy models are now breaking down The new digital networks are not analogous to railways and highways or their electronic forebears in telephony and broadcasting they are inherently unfriendly to centralized control of any sort so the old traditions of common carriage and public trustee regulation and regulatory gamesmanship no longer apply The authors technological and historical analysis leads logically toward a policy proposal for a reformed regulatory structure that builds and protects meaningful competition but that abandons its role as arbiter of tariffs and definer of public service and public interest [The Internet Upheaval](#) Ingo Vogelsang, Benjamin M. Compaine, 2000 Early 2000 saw the US economy enjoy the longest period of sustained growth and economic prosperity in its history This book argues that the impact of information technologies particularly the internet partly explain this phenomenon and analyzes the reform of telecommunications policy **Internet Telephony** Lee W. McKnight, William Lehr, David D. Clark, 2001 This book explores issues posed by convergent voice and data networks and considers future scenarios as Internet telephony continues to alter the communications landscape [The Affect Effect](#) George E. Marcus, W. Russell Neuman, Michael MacKuen, Ann N. Crigler, 2008-09-15 Passion and emotion run deep in politics but researchers have only recently begun to study how they influence our political thinking Contending that the long standing neglect of such feelings has left unfortunate gaps in our understanding of political behavior The Affect Effect fills the void by providing a comprehensive overview of current research on emotion in politics and where it is likely to lead In sixteen seamlessly integrated essays thirty top scholars approach this topic from a broad array of angles that address four major themes The first section outlines the philosophical and neuroscientific foundations of emotion in politics while the second focuses on how emotions function within and among individuals The final two sections branch out to explore how politics work at the societal level and suggest the next steps in modeling research and political activity itself Opening up new

paths of inquiry in an exciting new field this volume will appeal not only to scholars of American politics and political behavior but also to anyone interested in political psychology and sociology

Converging Infrastructures Lewis M. Branscomb, James Keller, 1996 This collection explores the opportunities for and possible implications of coordination between two of the major pieces of emerging infrastructure in the United States Intelligent Transportation Systems ITS and the National Information Infrastructure NII This collection explores the opportunities for and possible implications of coordination between two of the major pieces of emerging infrastructure in the United States Intelligent Transportation Systems ITS and the National Information Infrastructure NII Based on a recent workshop that was sponsored by the U S Department of Transportation MIT and Harvard Converging Infrastructures frames the programmatic organizational and technical issues involved

New Television, Old Politics Hernan Galperin, 2004-05-24 This book examines the economic political and technological forces that are shaping the future of broadcasting in advanced industrialized nations by comparing the transition from analog to digital TV in the US and Britain Digital TV involves a major reordering of the broadcast sector that requires governments to rethink governance tools for the digital media era By looking at how the transition is unfolding in these nations the book uncovers the political underpinnings of the emerging governance regime for digital communications and explores the implications of the transition for the development of the Information Society in the US and Europe The findings challenge much conventional wisdom about media deregulation and the globalization of communications The transition to digital TV has not weakened but rather reinforced government control over broadcasting Moreover contrary to what many globalization theories would predict it has reinforced preexisting differences in the organization of media across nations

Government and Business: American Political Economy in Comparative Perspective Richard Lehne, 2012-03-23 In this thoroughly updated edition Lehne takes a comparative approach evaluating the U S political economy with respect to those of Great Britain Germany Japan and the EU The book provides detailed historical context for and a conceptual understanding of the business government environment and then clarifies the roles of the major actors and outlines the regulatory and policy frameworks Along the way Lehne probes some of the most crucial dilemmas facing government and business today

The Economics, Technology and Content of Digital TV Darcy Gerbarg, 2012-12-06 As the world of television moves from analog to digital political and economic forces are being brought to bear on companies as they attempt to deal with changes occurring in their industries The impetus for the conversion from analog to digital TV comes from many quarters including the broadcasting industry the computer industry governments consumer electronics manufacturers content developers and the Internet The widespread acceptance of digital technology in both the home and the workplace account for the ready acceptance of the belief that the move to digital television is an appropriate advancement Not all authors in this volume however are believers This book is divided into four

sections each dealing with one aspect of the transition from analog to digital TV broadcasting The first section presents the various technologies It establishes a structure for understanding the technologies currently in use as well as those being developed by the industries involved in the delivery of digital television Section two presents information about consumer TV viewing and includes examples of innovative experimental interactive programs Economics and financial issues are addressed from a variety of perspectives in section three Section four concludes the book with a look at the international environment and the history of digital TV globally
