## The Grass Was That High:

**Stewards of the Grasslands** Dana Reiter, 2023-10-16 This book offers a series of interviews with Canadian ranchers that highlight the innovative and effective ways that they manage vast swaths of grassland for two complementary goals commercial viability and sustainable habitats The book's author is an academic who grew up among ranchers in the grasslands of Canada and the expertise and viewpoints she has distilled from these interviews complement the academic literature in accessible and surprising ways As these productive landscapes face increasingly perilous threats such as development economic pressures and extreme weather events it is the ranchers who live on and manage these native grasslands who are passionate about conserving them This book is about them their experiences and the realities of their lives their view of the world sharing their knowledge to assist younger ranchers and their contributions to Canada's species at risk conservation goals food security and economy The book offers practical advice for ranchers but also reveals the depth of attachment and dedication these ranchers have for the grasslands They are conservationists at heart as they not only understand that their livelihood is dependent on the health of the ecosystem they manage but they also have a deep connection to the land nurtured oftentimes for many generations Academics and ranchers have much to learn here but the book most of which is the words of the ranchers themselves is written to give the general public an understanding of this vocation and its role in the conservation of our last remaining grasslands *Ecology and Evolution of the Grass-Endophyte Symbiosis* Gregory P. Cheplick, Stanley Faeth, 2009-02-23 Endophytic fungi are common and diverse in plants Yet the nature of their interactions with host plants and how these interactions cascade upward to communities and ecosystems is largely unknown In the first book of its kind Gregory P Cheplick and Stanley H Faeth synthesize existing studies of endophyte grass symbioses within the context of modern ecological and evolutionary concepts The authors cover a broad range of topics including the effects of endophytes on herbivory host growth physiology reproduction and competitive ability in a variety of grasses and environments Clearly and engagingly written *Ecology and Evolution of the Grass Endophyte Symbiosis* highlights the most essential aspects of symbiosis ecology and evolution while suggesting avenues for future research Monograph of the Grasses of the United States and British America Vasey, 1892 *The Grass Crop* M. Jones, 2013-03-07 Grass is a very important world crop In some countries for example the UK Australia and New Zealand animal products from grassland make a greater contribution to the value of agricultural production than does any other crop Yet research being undertaken to further our understanding of the factors affecting the growth and productivity of grasslands has trailed in the shadow of the determined efforts made to improve our knowledge of cereals and to a somewhat lesser extent legumes However in spite of its low profile grassland research has resulted in considerable advances in our knowledge in the last 20 years and we feel that this book provides a timely opportunity to bring together some of this work in a review of what is primarily the ecophysiology of the temperate grass crop Unlike other crops grown for their grain or vegetative parts grass and grassland

products are used almost entirely for the feeding of ruminant animals the interaction of the sward and the animal thus adds an extra dimension to investigations of the productivity of grassland No one author could adequately encompass the breadth of work covered in the book Acknowledged experts have therefore been selected as contributors to provide an up to date review of their own specialized areas Whilst multi author texts can cause problems of lack of uniformity of approach each contributor has been made aware of the contents of the other chapters in an attempt both to provide continuity and to prevent glaring overlaps

Boonman,2013-03-09 The series Tasks for Vegetation Science is devoted to a variety of research aspects in vegetation science pure as well as applied Of the applied problems one of the most pressing is to achieve better knowledge and improvement of the pasture vegetation in tropical and subtropical regions As series editor I was impressed by the sheer volume of useful scientific information concerning pasture plants from East Africa collected during many years by Dr Boonman and compiled in one manuscript Dr Boonman first came to East Africa in 1963 on an overland journey along the river Nile which took him from Alexandria in Egypt to Lake Victoria in Uganda and Kenya and back again After a brief spell as a cotton agronomist in the Sudan Gezira he joined the grassland research team at Kitale Kenya in 1966 Improvement of seed yield of tropical grasses was his principal interest which finally led him into the field of breeding grasses Well known varieties from his work include Boma Elmba Rhodesgrass as well as Clone 13 Elephantgrass In 1979 he was recalled to The Netherlands to head a cooperative seed company involved in the breeding of grasses and cereals The author has focused this study on one region Eastern Africa Global application of theories runs into conflicts too easily with local types of farming if not with bare economics Very few books can be found that describe existing practices and seek local answers by digging deep in the stacks of old local reports
