The Great Natural History Coloring:

The Great Natural History Coloring Book Roger Thornhill, 1981 **A History of Color** Robert A. Crone, 2012-12-06 This is the first comprehensive text on the history of color theories since Halbertsma's book of 1947. Color is discussed in close connection with the evolution of ideas of light and vision. The book has chapters on the ancient Greek ideas of vision and color, on the contributions of Arabic science, on the Scientific Revolution from Kepler to Newton, on the early history of the three color hypothesis, on the trichromatic theory and defective color vision, and on Goethe's, Schopenhauer's, and Hering's theories. New understanding of the structure and functions of the retina and the brain finally results in the modern science of color vision. *A History of Color* has been written for ophthalmologists, optometrists, and others who are interested in visual science and its history. The book requires no specialized knowledge. *The Color Line: a History* Ethan Malveaux, 2015-01-09 My book *The Color Line: A History* is about how the ethnic biases of the European of Ancient Rome morphed into the racial prejudice of modern times through a process that was centuries in the making. From the collapse of Ancient Rome to the rise of Christendom, then to the discovery of the American continents, through to the landmark Supreme Court decision of *Plessy v. Ferguson*, I will take the reader on a journey that will shatter preconceived notions of European and African relations. The narrative strain of my comprehensive composition seeks to historically follow the advent of the color classifications of white and black by using primary and secondary sources to explain this social and psychological concept which still influences our world. Reports of the Survey - Geological and Natural History Survey of Minnesota Geological and Natural History Survey of Minnesota, 1898 *The Natural History of Sexuality in Early America* Greta LaFleur, 2020-08-04 How natural history made sex scientific in the eighteenth century. If sexology, the science of sex, came into being sometime in the nineteenth century, then how did statesmen, scientists, and everyday people make meaning out of sex before that point? In *The Natural History of Sexuality in Early America*, Greta LaFleur demonstrates that eighteenth-century natural history, the study of organic life in its environment, actually provided the intellectual foundations for the later development of the scientific study of sex. Natural historians understood the human body to be a porous envelope, eminently vulnerable to its environment. Yet historians of sexuality have tended to rely on archival evidence of genital-based or otherwise bodily sex acts for source material. Through careful readings of both elite natural history texts and popular print forms that circulated widely in the British North American colonies, among them Barbary captivity, execution, cross-dressing, and anti-vice narratives, LaFleur traces the development of a broad knowledge of sexuality defined in terms of the dynamic relationship between the human and the natural, social, physical, and climatic milieu. At the heart of this book is the question of how to produce a history of sexuality for an era in which modern vocabularies for sex and desire were unavailable. LaFleur demonstrates how environmental logic was used to explain sexual behavior on a broad scale, not just among the educated elite who wrote and read natural historical texts. LaFleur reunites the history of sexuality with the history of race, demonstrating how they were

bound to one another by the emergence of the human sciences Ultimately The Natural History of Sexuality in Early America not only rewrites all dominant scholarly narratives of eighteenth century sexual behavior but also poses a major intervention into queer theoretical understandings of the relationship between sex and the subject **Bulletin of the New York State Museum of Natural History**, 1906 Natural History Dioramas Sue Dale Tunnicliffe, Annette Scheersoi, 2014-12-05 This book brings together in a unique perspective aspects of natural history dioramas their history construction and rationale interpretation and educational importance from a number of different countries from the west coast of the USA across Europe to China It describes the journey of dioramas from their inception through development to visions of their future A complementary journey is that of visitors and their individual sense making and construction of their understanding from their own starting points often interacting with others e g teachers peers parents as well as media e g labels Dioramas have been hitherto a rather neglected area of museum exhibits but a renaissance is beginning for them and their educational importance in contributing to people s understanding of the natural world This volume showcases how dioramas can reach a wide audience and increase access to biological knowledge **Kidd's Own Journal; for Inter-Communications on Natural History, Popular Science, and Things in General**, 1852 **The Color of Equality** Devin J. Vartija, 2021-08-06 The Enlightenment is often either praised as the wellspring of modern egalitarianism or condemned as the cradle of scientific racism How should we make sense of this paradox The Color of Equality is the first book to investigate both the inclusive language of common humanity and the hierarchical language of race in Enlightenment thought seeking to understand how eighteenth century thinkers themselves made sense of these tensions Using three major Enlightenment encyclopedias from England France and Switzerland the book provides a rich contextualization of the conflicting ideas of equality and race in eighteenth century thought Enlightenment thinkers used physical features to categorize humanity into novel racial groups in a discourse that was imbued with Eurocentric aesthetic and moral judgments Simultaneously however these very same thinkers politicized equality by putting it to new uses such as a vitriolic denunciation of slavery and inhumane treatment that was grounded in the nascent philosophy of human rights Vartija contends that the tension between Enlightenment ideas of race and equality can best be explained by these thinkers attempt to provide a naturalistic account of humanity including both our physical and moral attributes Enlightenment racial classification fits into the novel inclusion of humanity in histories of nature while the search for the origins of morality in social experience alone lent equality a normative authority it had not previously possessed Eschewing straightforward approbation or blame of the Enlightenment The Color of Equality demonstrates that our present day thinking about human physical and cultural diversity continues to be deeply informed by an eighteenth century European intellectual revolution with global ramifications **The World According to Color** James Fox, 2025-09-23 A kaleidoscopic exploration that traverses history literature art and science to reveal humans unique and vibrant relationship with color We have an extraordinary connection to color we give it meanings associations and properties

that last millennia and span cultures continents and languages In *The World According to Color* James Fox takes seven elemental colors black red yellow blue white purple and green and uncovers behind each a root idea based on visual resemblances and common symbolism throughout history Through a series of stories and vignettes the book then traces these meanings to show how they morphed and multiplied and ultimately how they reveal a great deal about the societies that produced them reflecting and shaping their hopes fears prejudices and preoccupations Fox also examines the science of how our eyes and brains interpret light and color and shows how this is inherently linked with the meanings we give to hue And using his background as an art historian he explores many of the milestones in the history of art from Bronze Age gold work to Turner Titian to Yves Klein in a fresh way Fox also weaves in literature philosophy cinema archaeology and art moving from Monet to Marco Polo early Japanese ink artists to Shakespeare and Goethe to James Bond By creating a new history of color Fox reveals a new story about humans and our place in the universe second only to language color is the greatest carrier of cultural meaning in our world
