Paving the Great Way Jonathan Gold, 2014-11-18 The Indian Buddhist philosopher Vasubandhu fourth fifth century C E is known for his critical contribution to Buddhist Abhidharma thought his turn to the Mahayana tradition and his concise influential Yogacara Vijñānavāda texts Paving the Great Way reveals another dimension of his legacy his integration of several seemingly incompatible intellectual and scriptural traditions with far ranging consequences for the development of Buddhist epistemology and the theorization of tantra Most scholars read Vasubandhu's texts in isolation and separate his intellectual development into distinct phases Featuring close studies of Vasubandhu's Abhidharmakosabhasya Vyākhyayukti Vimsatika and Trisvabhavanirdeśa among other works this book identifies recurrent treatments of causality and scriptural interpretation that unify distinct strands of thought under a single coherent Buddhist philosophy In Vasubandhu's hands the Buddha's rejection of the self as a false construction provides a framework through which to clarify problematic philosophical issues such as the nature of moral agency and subjectivity under a broadly causal worldview Recognizing this continuity of purpose across Vasubandhu's diverse corpus recasts the interests of the philosopher and his truly innovative vision which influenced Buddhist thought for a millennium and continues to resonate with today's philosophical issues An appendix includes extensive English language translations of the major texts discussed

A Greater Freedom Stephan Kampowski, 2014-02-27 How does biotechnology touch on human destiny What are its promises and challenges In search for a response the present volume turns to the thought of Hans Jonas one of the pioneers and founding fathers of bioethics The continued relevance of his ideas is exemplified by the way Jürgen Habermas applies them to the current debate The chief promise of biotechnology is to increase our freedom by overcoming the limits of the human condition The main risk of biotechnology as both Jonas and Habermas see it is to diminish or outright abolish our capacity for responsibility and morality It is argued that the greater freedom is not simply freedom from constraints but freedom for our destiny the freedom to be the benevolent responsible and spontaneous authors of our lives capable of communion and love The touchstone for evaluating any biotechnological procedure has to be this greater freedom

Freedom in Resistance and Creative Transformation Michael St. A. Miller, 2013-04-11 In Freedom in Resistance and Creative Transformation Michael Miller addresses the concept of freedom that is central to the grammar of Christian faith and important in a wide range of religious and nonreligious settings across the globe He confronts the fact that despite the

claimed importance of freedom there continues to be interpersonal socio political and religious power hierarchies that keep some people dominant and others subjugated The book suggests that often these hierarchies are informed by Christian teachings that deny freedom to human beings on the basis of their humanity per se Having classified humanity as fallen we are instructed that freedom is experienced by disparaging our humanity as we actually experience it seeing ourselves as our own worst enemies and accepting bondage to God the bondage reflected in the character of relations with those seen as God's special representatives in the world Miller presents a case against this understanding of the human situation and in the process he critically engages the Old and New Testaments along with ideas of significant representatives of Christian orthodoxy As an alternative he promotes freedom that is finite realistically libertarian and relational as most compatible with the character of human beings that are partially self creating and self determining Contributing to this position is the view that an infinitely temporal God by character and desire participates in human life in a way that ensures the requisite space for authentic decision making from which emerges genuinely novel possibilities for human life This dynamic has implications for the continued development of the human species and the quality of life in the cosmos as a whole
