The Myth of Green Marketing Toby Maureen Smith,1998-01-01 In this groundbreaking study Toby Smith analyses the role that social myths such as green marketing play in public understanding of the environmental crisis This book introduces the concept of hegemony into environmental politics using the concept to elucidate the political economic and social alliance that sustains our belief in industrial expansionism The ecological crisis of the late twentieth century presents a challenge to the very foundations of this alliance The hegemonic system reacts to a threat to its structure by producing social myths that provide a common sense understanding of the threat Smith examines one such social myth the contemporary phenomenon known as green marketing and how it came to reinforce rather than challenge the ethics of productivism By analysing green marketing as it relates primarily to the early 1990s corporate campaigns of companies such as McDonald's Shell Chemicals and Mobil Chemical Co Smith demonstrates how these voices weave together an understanding of green consumerism using familiar language from economic and liberal democratic discourses The Myth of Green Marketing is an original and important contribution to the field of environmental studies As the first book on green marketing it is sure to raise controversy with its unique discussion of the cultural and social aspects of environmental issues **The Symbolic Earth**

James G. Cantrill,Christine L. Oravec,2021-10-21 The core dilemma in environmental advocacy may be illustrated by the question When we communicate about the world should we stress what we know or what we feel The contributors to The Symbolic Earth argue that it is more important to decide how we should talk about what we know and feel In their view the environment is largely a product of how we talk about the world Because the environment is a social construction the only hope we have of preserving it is to understand and alter the fundamental ways we discuss it This collection first examines the ways in which discourse creates environment perceptions Subjects discussed range from the description of natural scenery to the advocacy of political interest groups from the everyday interactions of citizens facing environmental crises to the greenwashing of corporate imagemakers and from the psychology of the mass public to the social constructions of the mass media The authors include nationally known scholars of environmental history rhetorical theory ethnography communication and journalism studies public policy and media criticism **Ecocritique** Timothy W. *Environmentalism for a New Millennium* Leslie Paul Thiele,1999-04-29 The vast majority of people in the industrialized world consider themselves environmentalists Yet environmental problems continue to worsen While the environmental movement is winning the battle for the hearts and minds of citizens in the United States and across the globe it may be losing the war to preserve the health of the planet and its biological diversity The reasons become clear in this book Leslie Paul Thiele provides a much needed analysis of the driving forces within the environmental movement and the key challenges that it faces He begins with a concise history of the movement in the United States where he identifies four successive waves of environmental thought and action The first wave conservation emerged in the mid 1800s and focused on the responsible use of natural resources and the preservation of isolated tracts of wilderness By the 1960s the general public had become aware of the widespread impact of environmental problems on human health and welfare A concern for the containment of industrial society s environmental degradation emerged This second wave was followed by a period of co optation beginning in the 1980s as a now popular social movement made a significant impact on public policy and witnessed the dilution of its goals Thiele largely focuses on the fourth and current wave of coevolution Coevolutionary thought and action is grounded in the interdependence of humans and nature in a global context With the goal of sustainable development in mind contemporary environmentalists argue that human livelihoods must be integrated into complex and evolving ecological systems This affirmation of coevolutionary interdependence has brought coherence to an inherently diverse social movement Through extensive interviews and a critical study of environmental publications and scholarly research the author provides an inside look at the environmental movement His analysis illuminates the social economic political and cultural forces that shape the environmental movement today and set its trajectory for the 21st century Anyone interested the future of environmentalism will find this book an
