The Growth Factor:

Handbook of Growth Factors Enrique Pimentel, 1994-06-02 Volume II of Handbook of Growth Factors presents a stimulating discussion of the best characterized polypeptide growth factors including insulin insulin like growth factors epidermal growth factor fibroblast growth factors neurotrophic growth factors and transforming growth factors The structure and function of each growth factor is discussed as well as its receptor and postreceptor mechanism of action and its role in neoplastic processes Regulatory peptides with growth factor like properties such as bombesin angiotensin endothelin atrial natriuretic factor vasoactive intestinal peptide and bradykinin are examined in depth Factors related to the growth of organs such as the prostate the heart and the mammary gland are also covered **Growth Factors** Knud W. Kastrup, Jens Høiriis Nielsen, 2013-10-22 Growth Factors Cellular Growth Processes Growth Factors Hormonal Control of Growth is a compilation of papers from the 11th Meeting of the Federation of European Biochemical Societies in Copenhagen in 1977 The book explains the process that leads to cell replication in vitro and to actual growth in vivo One paper then examines the use of a combined method to analyze growth control in a culture specimen Another paper notes the evidence favoring the hypotheses that a delicately regulated increase in the amount of adenine and guanine nucleotide can affect significantly the metabolic pattern of cells that are likely to begin a new mitotic cycle The book also discusses the possibility that natural polyamines can serve as growth factors and regulate cell growth in some microorganisms and in cell lines of animal origin Consequently the use of polyamine measurements to diagnose markers in human malignancies is one practical application of polyamine metabolism The book also explains the effect of collagen on the chondrogenic differentiation of somite and limb bud mesenchyme on the biochemical processes in bone and cartilage formation Another paper then discusses the effects of sex hormones on the growth of normal tissues particularly on lean and fat tissues The book can prove useful for biologists chemists biochemists and academicians interested in cellular microbiology Growth Factors, Part A C. Bondy, D. LeRoith, 1996-06-25 This series provides a variety of different discussions on topics within the field of growth factors and cytokines in health and disease *Growth Factors, Differentiation Factors, and Cytokines* Andreas Habenicht, 2012-12-06 Leading international experts contribute to this selection of reviews covering the merging fields of growth factors differentiation factors and cytokines These appear to play fundamental roles in a wide variety of physiological and pathophysiological processes that include the regulation of growth in normal and malignant cells embryogenesis the immune response wound healing inflammation and atherogenesis The major aspects of recent research and development are discussed providing an important update in this pioneering field **Biology of Growth Factors** J. E. Kudlow, 2013-11-09 Growth factors are elaborated to control the growth of cells in such physiological processes as wound healing tissue regeneration and the immune response Abnormal production of these growth factors their receptors or intracellular mediators of their action may lead to disease states including oncogenesis This volume will focus on exciting developments in

defining the precise molecular lesions that permit the conversion of controlled proliferative signals to neoplasia on the possible involvement of growth factors in the development of blood vessel diseases as seen in diabetes and atherosclerosis on the altered immune surveillance that leads to autoimmunity and on the fundamental mechanisms by which growth factors signal their target cells We expect that the contents of this volume will help promote understanding of the role of these fundamental biological processes and their alterations in a wide variety of disease states and stimulate new investigations in this important area of biomedical research

Peptide Growth Factors and Their Receptors I Michael B. Sporn, Anita B. Roberts, 2012-12-06

This two volume treatise the collected effort of more than 50 authors represents the first comprehensive survey of the chemistry and biology of the set of molecules known as peptide growth factors Although there have been many symposia on this topic and numerous publications of reviews dealing with selected subsets of growth factors the entire field has never been covered in a single treatise It is essential to do this at the present time as the number of journal articles on peptide growth factors now makes it almost impossible for anyone person to stay informed on this subject by reading the primary literature At the same time it is becoming increasingly apparent that these of universal importance in biology and medicine and that the substances are original classification of these molecules based on the laboratory setting of their discovery as growth factors lymphokines cytokines or colony stimulating factors was quite artifactual they are in fact the basis of a common language for intercellular communication As a set they affect essentially every cell in the body and in this regard they provide the basis to develop a unified science of cell biology germane to all of biomedical research This treatise is divided into four main sections After three introductory chapters its principal focus is the detailed description of each of the major

peptide growth factors in 26 individual chapters *Growth Factors in Biology and Medicine* David Evered, Jonathan Nugent, Julie Whelan, 1985 **Growth Factors, Peptides, and Receptors** Terry W. Moody, 2012-12-06 The Twelfth Annual Washington Spring Symposium on Health Sciences attracted over 300 scientists from 20 countries It was held at the Lisner Auditorium of the George Washington University in Washington D C during June 1 5 1992 The theme of the meeting was Growth Factors Peptides and Receptors and speakers emphasized both basic and clinical research in these areas The seven plenary sessions emphasized Peptides Growth Factors Peptide Receptors Growth Factor Receptors Second Messengers Proliferation and Clinical Correlations The chapters in this volume are derived from each of these scientific sessions plus the poster and special sessions The Abraham White Distinguished Scientist Award was presented to Dr Solomon H Snyder for his numerous contributions to the field of neurochemistry He presented the keynote address Nitric Oxide A Novel Neuronal Messenger Dr Snyder discussed the pathway of nitric oxide NO synthesis by the enzyme NO synthase Released NO may be responsible for the neuronal toxicity associated with NMDA an excitatory amino acid analogue Dr Snyder noted that NO may be the first of a new class of transmitters with carbon monoxide being another candidate The Distinguished Public Service Award was presented to Senator Fritz Hollings in of his leadership and outstanding achievements in the United States Senate recognition and for his legislative support for biomedical research and education In the symposium banquet address Senator Hollings stressed the need for continued support of research to combat serious diseases such as cancer **Biology of the Mammary Gland** John A. Mol, Roger A. Clegg, 2006-04-11 Proceedings of the European Cooperation in the Field of Scientific and Technical Research COST 825 Symposium on Mammary Gland Biology held September 16 18 1999 in Tours France It is difficult to overstate the evolutionary and functional significance of mammary tissue in biology Substantial progress has been made by researchers in various disciplines particularly over the last fifteen years towards realizing the potential of this tissue to yield powerful experimental models for morphogenesis and tissue development for cellular differentiation for the biosynthesis and secretion of proteins lipids small molecules and inorganic salts and for the coordination and regulation of these processes More recently the possibility of exploiting the secretory epithelial cells of mammary tissue as cell factories has become a reality and the recombinant production by lactating animals of an increasing number of proteins valuable both in the pharmaceutical and nutraceutical fields is in progress or under development Also in this sphere of agricultural production genetic as well as nutritional technologies are under investigation and exploitation to optimize milk composition for various end uses for instance in food process and manufacture The possibilities of deriving health benefit from the bioactive properties of some of the minor constituents of milk are emerging to counter the highly publicized negative health impact of excessive consumption of saturated animal fats In human nutrition and medicine the mammary gland is both a source of nutrition to the neonate and a potential health threat to the adult female breast cancer remains the major single cause of female mortality in most developed countries This volume provides a unique glimpse into our understanding at the

cutting edge of a variety of disciplines of this versatile and extraordinary tissue at the birth of the twenty first century
