### **Shores of Knowledge: New World Discoveries and the Scientific Imagination** Joyce

Appleby, 2013-10-14 Uncommonly good makes a compelling case that intellectual curiosity not only changed Europe but launched modernity Cleveland Plain Dealer When Columbus first returned to Spain from the Caribbean he dazzled King Ferdinand and Queen Isabella with exotic parrots tropical flowers and bits of gold Inspired by the promise of riches countless seafarers poured out of the Iberian Peninsula and wider Europe in search of spices treasure and land Many returned with strange tales of the New World Curiosity began to percolate through Europe as the New World's people animals and plants ruptured prior assumptions about the biblical description of creation The Church long fearful of challenges to its authority could no longer suppress the mantra Dare to know Noblemen began collecting cabinets of curiosities soon others went from collecting to examining natural objects with fresh eyes Observation led to experiments competing conclusions triggered debates The foundations for the natural sciences were laid as questions became more multifaceted and answers became more complex Carl Linnaeus developed a classification system and sent students around the globe looking for specimens Museums botanical gardens and philosophical societies turned their attention to nature National governments undertook explorations of the Pacific Eminent historian Joyce Appleby vividly recounts the explorers triumphs and mishaps including Magellan's violent death in the Philippines the miserable trek of the new Argonauts across the Andes on their mission to determine the true shape of the earth and how two brilliant scientists Alexander Humboldt and Charles Darwin traveled to the Americas for evidence to confirm their hypotheses about the earth and its inhabitants Drawing on detailed eyewitness accounts Appleby also tells of the turmoil created in the all societies touched by the explorations This sweeping global story imbues the Age of Discovery with fresh meaning elegantly charting its stimulation of the natural sciences which ultimately propelled Western Europe toward modernity

### **The Knowledge of Nature and the Nature of Knowledge in Early Modern Japan** Federico Marcon, 2015-07-16

From the early seventeenth to the mid nineteenth century Japan saw the creation development and apparent disappearance of the field of natural history or honzogaku Federico Marcon traces the changing views of the natural environment that accompanied its development by surveying the ideas and practices deployed by honzogaku practitioners and by vividly reconstructing the social forces that affected them These include a burgeoning publishing industry increased circulation of ideas and books the spread of literacy processes of institutionalization in schools and academies systems of patronage and networks of cultural circles all of which helped to shape the study of nature In this pioneering social history of knowledge in Japan Marcon shows how scholars developed a sophisticated discipline that was analogous to European natural history but formed independently He also argues that when contacts with Western scholars traders and diplomats intensified in the nineteenth century the previously dominant paradigm of honzogaku slowly succumbed to modern Western natural science not by suppression and substitution as was previously thought but by creative adaptation and transformation

edited from sixty nine full text papers of the 132 papers presented to the IUFRO International Union of Forestry Research Organizations Conference on Environmental Forest Science which was jointly organized by IUFRO Division 8 Forest Environment and Kyoto University in Kyoto Japan on 19-23 October 1998. The International Union of Forestry Research Organizations IUFRO is one of the oldest scientific societies. It was founded in 1892 to foster cooperation of research units on forestry. IUFRO consists of 650 research organizations from 100 countries. IUFRO Division 8 is the latest division founded at the 20 World Congress in 1995 by subdividing the previous Division 1 Forest Environment and Silviculture. **Conservation Biology for All** Navjot S. Sodhi, Paul R. Ehrlich, 2010-01-08. Conservation Biology for All provides cutting edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting edge conservation knowledge as widely as possible. Important topics such as balancing conservation and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species, management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries so that they are in a better position to protect their natural resources.

**Evolutionary Thinking Across Disciplines** Agathe du Crest, Martina Valković, André Ariew, Hugh Desmond, Philippe Huneman, Thomas A. C. Reydon, 2023-06-26. This volume aims to clarify the epistemic potential of applying evolutionary thinking outside biology and provides a survey of the current state of the art in research on relevant topics in the life sciences, the philosophy of science, and the various areas of evolutionary research outside the life sciences. By bringing together chapters by evolutionary biologists, systematic biologists, philosophers of biology, philosophers of social science, complex systems modelers, psychologists, anthropologists, economists, linguists, historians, and educators, the volume examines evolutionary thinking within and outside the life sciences from a multidisciplinary perspective. While the chapters written by biologists and philosophers of science address theoretical aspects of the guiding questions and aims of the volume, the chapters written by researchers from the other areas approach them from the perspective of applying evolutionary thinking to non-biological phenomena. Taken together, the chapters in this volume do not only show how evolutionary thinking can be

fruitfully applied in various areas of investigation but also highlight numerous open problems unanswered questions and issues on which more clarity is needed As such the volume can serve as a starting point for future research on the application of evolutionary thinking across disciplines      **Conservation of Faunal Diversity in Forested Landscapes** R.M.

DeGraaf,R.I. Miller,2012-12-06 Forest wildlife conservation is critically required in many parts of the world today This book presents a merger between the elements of wildlife conservation and habitat conservation and explains how these disciplines can be used to promote the conservation of vertebrates in forests around the world      *The Discoverers* Daniel J.

*Lamarckism* Snait B. Gissis,Eva Jablonka,2011-04-22 A reappraisal of Lamarckism its historical impact and contemporary significance In 1809 the year of Charles Darwin s birth Jean Baptiste Lamarck published Philosophie zoologique the first

comprehensive and systematic theory of biological evolution The Lamarckian approach emphasizes the generation of developmental variations Darwinism stresses selection Lamarck's ideas were eventually eclipsed by Darwinian concepts especially after the emergence of the Modern Synthesis in the twentieth century The different approaches which can be seen as complementary rather than mutually exclusive have important implications for the kinds of questions biologists ask and for the type of research they conduct Lamarckism has been evolving or in Lamarckian terminology transforming since Philosophie zoologique's description of biological processes mediated by subtle fluids Essays in this book focus on new developments in biology that make Lamarck's ideas relevant not only to modern empirical and theoretical research but also to problems in the philosophy of biology Contributors discuss the historical transformations of Lamarckism from the 1820s to the 1940s and the different understandings of Lamarck and Lamarckism the Modern Synthesis and its emphasis on Mendelian genetics theoretical and experimental research on such Lamarckian topics as plasticity soft epigenetic inheritance and individuality and the importance of a developmental approach to evolution in the philosophy of biology The book shows the advantages of a Lamarckian perspective on evolution Indeed the development oriented approach it presents is becoming central to current evolutionary studies as can be seen in the burgeoning field of Evo Devo Transformations of Lamarckism makes a unique contribution to this research
