

Chapter 2: Methods of Studying Sociology

Components of a Scientific Theory

1. Concepts and Variables

- A concept is an abstract system
- Helps us to perceive a phenomenon in a particular way. These are tools that helps is to share meaning
- Degree or value of a concept is called variables. Ex.: Dollar (concept), level of income (variable)

2. Proposition and Hypotheses

- Proposition is a statement about the nature of some phenomena
- When the proposition is formulated in a way that can be tested, is called a hypothesis
- Ex: Students' hard work and their academic success
- Ex: Hours of study and GPA

- **Operationalization:** Measuring a concept or variable

- Think about a 10-point scale you see at the doctor's office
- Quantify the concept
- Makes an abstract variable measurable
- Observable
- Permits another researcher to replicate the study

Standards of Scientific Inquiry

1. **Objectivity:** Bias-free. I will do the research objectively
 2. **Replication:** Someone else can duplicate the study. The research should be replicable.
 3. **Precision of measurement:** The result should be precise, valid, and reliable.
- Does it mean that we cannot study abstract concepts, like pain/happiness?
