W. S. Rosenfield, *Sociology of Medicine: Disease, Doctor and Change*. New York: Harper & Row, 1980, £10.75, xiii + 446 pp.

L. G. Mishler et al., *Social Contexts of Health, Disease and Patients Care*. Cambridge: Cambridge University Press, 1981, \$20.00 hb, £5.95 pb, x + 217 pp.

Rosenfield, whose work is well established in medical sociology, confesses in the preface of his new textbook, 'confessing in the process of his new textbook to being fifty years old and to have first published in the field some twenty years ago. Mishler and his colleagues on the other hand claim only to have 'extensive' experience (collectively) of teaching and research in medical psychiatric settings. These biographic details are important because they accurately reflect the respective contents of these two books which belong to different eras in the development of medical sociology.

There were undoubted earlier forays but, from about the mid-1970s medical sociology finally invaded the citadel of medicine in that medical knowledge began to be seen as a deliberate social construction. Traditionally medical knowledge had been seen as the exclusive domain of the medical profession because it was believed to be highly technical and scientific and hence without sociological interest apart from the occasional social factor that might have aided or impeded its discovery – or at least might have momentarily distorted it. With the realization that medical knowledge was not privileged but based, as Freidson notes, in 'social reality' the way was opened for 'new analyses of all the traditional problem areas of medical sociology and the formulation of entirely new ones.

For Rosenfield, who did his apprenticeship at a time when what might be called the 'social factors' perspective¹ was dominant, there are two approaches within the subject, namely the sociology of medicine and sociology of medicine. The former is the position of the possibly cynical doctor who has betrayed the critical faculties of sociology for a pot of gold usually in the form of a medical

research grant. The good sociologist, on the other hand, is supposed to have accepted that all of medicine was open to critical analysis whatever the influence of medical interests. The problem with Rosenfield's interpretation of this position is that he has chosen to step back of a sociological account of medical knowledge and in place of a vigorous frontal assault on the citadel of medicine he has merely cited 'deductivist' and proceeded to build a rival fortress based on 'radical realism'. In consequence the sociologist is left with two positions of sorts of truth, one medical and one 'sociological' which even though it claims to surpass the medical is surely in need of some critical sociological evaluation itself.

By contrast Mishler and his colleagues in a logical and well-thought-out sequence of essays have shown that the medical citadel is shattering and is not. 'Normally, disease, disability and various aspects of health care are all complex social constructions: medicine is a social enterprise from the cellular basis of disease to the latest technological therapeutic triumph. It is all the domain of the social scientist. Rosenfield's book belongs to the old mode, Mishler's to the new. Rosenfield reflects the concreteness and perhaps the optimism of an age past even though it was in recent. He accepts the medical myth that tuberculosis has been defeated by a 'strict regimen of lifestyle and chemical therapy', he accepts the official statistics that health morbidity has shifted from acute to chronic: he even suggests

half in jest – that by the year 2000 Americans might have a life expectancy of ninety years. It all seems fairly dated now – even the British class system is referred to 'somewhat quaintly' as 'a vestige of the United Kingdom's historic location overlooking its contact with modern industrial capitalism'. And a Marxist account of both defects in Scotland is rejected because 'seemingly capitalist Britain in fact introduced a National Health Service in 1948 "which guaranteed uniform health care to all citizens regardless of class position".

Tribal Ethnomedicine K. Jose Boban,1998 Medical practices and healing rituals existing within the tribal communities of Kerala India *The New Pediatrics* Dorothy Pawluch,2017-07-05 When antibiotics became readily available in the 1950s the danger of life threatening infectious childhood diseases virtually disappeared In that era pediatricians broadened the core professional task of their specialty the prevention and treatment of such diseases to incorporate the behavioral and psychosocial problems of children and adolescents Pediatricians themselves began to refer to this changing emphasis as the new pediatrics and to see the trend as a natural progression of their specialty into new areas of care At the same time there arose widespread disaffection among practicing general pediatricians defection to other areas of practice and a decline in the popularity of pediatrics as a specialty choice In analyzing the emergence of the new pediatrics as a case study within medical sociology Pawluch shows how professional concerns and interests influence debate around social problems As sociologists began to take greater interest in the problems of childhood and as children s lives became increasingly medicalized as some have argued it is at least in part because of pediatricians willingness to endorse medical definitions for certain social problems and to provide treatment for them Pawluch s underlying concern is that medical professionals have begun to make claims for authority in the definition of what constitutes the social problems of childhood Among the topics she examines are

the dissatisfied pediatrician syndrome the potential for a crisis in oversupply of pediatricians and competing providers of services the push for expansion into new areas of care and possible future developments in this specialty

the basic ideological underpinnings that have driven the Bush administration that have generally been viewed by Europeans as exceptional have been present in American politics since its earliest colonial beginnings with the Puritans and been carried forward by the ideological descendants of the Puritans from that time through the present In essence the form of American conservative exceptionalism exhibited during the Bush administration was present in American politics from the very beginning and has continued through the present albeit in a more extreme form since the traditional ideological conservatives currently dominate all three branches of the American government and the terror attacks of 9 11 allowed them to garner popular support for their exceptional programs

Health Behavior Sonya Bahar,2013-11-11 HEALTH BEHAVIOR AS BASIC RESEARCH Health behavior is not a traditional discipline but a newly emerging interdisciplinary field It is still in the process of establishing its identity Few institutional or organizational structures i e departments and programs reflect it and few books and journals are directed at it The primary objective of this book is thus to identify and establish health behavior as an important area of basic research worthy of being studied in its own right As a basic research area health behavior transcends commitment to a particular behavior a specific illness or health problem or a single set of determinants One way of achieving this objective is to look at health behavior as an outcome of a range of personal and social determinants rather than as a set of risk factors or as targets for intervention strategies directed at behavioral change The book is thus organized primarily in terms of the size of the determinants of concern rather than in terms of specific health behaviors or specific health problems or conditions With the first part of the book establishing working definitions of health behavior and health behavior research as basic frameworks the second part moves from smaller to larger systems informing the reader about basic research that demonstrates how health behavior is determined by personal family social institutional and cultural factors These distinctions reflect some arbitrariness the family organizations and institutions for example are social units Medical Sociology John G.
