Hutter,Werner Stephan,Paolo Traverso,Markus Ullmann,2007-07-21 This volume contains the contributions presented at the International Workshop on Current Trends in Applied Formal Methods organized October 7 9 1998 in Boppard Germany The main objective of the workshop was to draw a map of the key issues facing the practical application of formal methods in industry This appears to be particularly timely with safety and security issues becoming a real obstacle to industrial software and hardware development As a consequence almost all major companies have now set up departments or groups to work with formal methods and many European countries face a severe labour shortage in this new field Tony Hoare s prediction of the art of software and hardware development becoming a proper engineering science with its own body of tools and techniques is now becoming a reality So the focus of this application oriented workshop was not so much on special academic topics but rather on the many practical aspects of this emerging new technology verification and validation and tool support and integration into the software life cycle By evaluating the state of the art with respect to industrial applications a discussion emerged among scientists practising engineers and members of regulatory and funding agencies about future needs and developments This discussion lead to roadmaps with respect to the future of this field to tool support and potential application areas and promising market segments The contributions of the participants from industry as well as from the respective national security bureaus were particularly valuable and highly appreciated **Software Architecture**

Jan Bosch,Morven Gentleman,Christine Hofmeister,Juha Kuusela,2002-07-31 For more and more systems software has moved from a peripheral to a central role replacing mechanical parts and hardware and giving the product a competitive edge Consequences of this trend are an increase in the size of software systems the variability in software artifacts and the importance of software in achieving the system level properties Software architecture provides the necessary abstractions for managing the resulting complexity We here introduce the Third Working IEEE/IFIP Conference on Software Architecture WICSA3 That it is already the third such conference is in itself a clear indication that software architecture continues to be an important topic in industrial software development and in software engineering research However becoming an established field does not mean that software architecture provides less opportunity for innovation and new directions On the contrary one can identify a number of interesting trends within software architecture research The first trend is that the role of the software architecture in all phases of software development is more explicitly recognized Whereas initially software architecture was primarily associated with the architecture design phase we now see that the software architecture is

treated explicitly during development product derivation in software product lines at run time and during system evolution
Software architecture as an artifact has been decoupled from a particular lifecycle phase *Database and Expert Systems Applications* Roland R. Wagner,1996-08-28 Content Description Includes bibliographical references and index

Process Technology Elisabetta Di Nitto,Alfonso Fuggetta,2012-12-06 Process Technology brings together in one place important contributions and up to date research results in this fast moving area Process Technology serves as an excellent reference providing insight into some of the most challenging research issues in the field **Software Process: Principles, Methodology, and Technology** Jean-Claude Derniame,Badara A. Kaba,David Wastell,2006-08-18 1 Jean Claude Derniame Software process technology is an emerging and strategic area that has already reached a reasonable degree of maturity delivering products and significant industrial experiences This technology aims at supporting the software production process by providing the means to model analyse improve measure and whenever it is reasonable and convenient to automate software production activities In recent years this technology has proved to be effective in the support of many business activities not directly related to software production but relying heavily on the concept of process i e all the applications traditionally associated with workflow management This book concentrates on the core technology of software processes its principles and concepts as well as the technical aspect of software process support The contributions to this book are the collective work of the Promoter 2 European Working Group This grouping of 13 academic and 3 industrial partners is the successor of Promoter a working group responsible for creating a European software process community Promoter 2 aims at exploiting this emerging community to collectively develop remaining open issues to coordinate activities and to assist in the dissemination of results The title Software Process Modelling and Technology Fink94 was produced during Promoter 1 Being project based it presented the main findings and proposals of the different projects then being undertaken by the partners **Managing Software Engineering Knowledge** Aybüke Aurum,Ross Jeffery,Claes Wohlin,Meliha Handzic,2013-04-17 Software development is a complex problem solving activity with a high level of uncertainty There are many technical challenges concerning scheduling cost estimation reliability performance etc which are further aggravated by weaknesses such as changing requirements team dynamics and high staff turnover Thus the management of knowledge and experience is a key means of systematic software development and process improvement

Managing Software Engineering Knowledge illustrates several theoretical examples of this vision and solutions applied to industrial practice. It is structured in four parts addressing the motives for knowledge management, the concepts and models used in knowledge management for software engineering, their application to software engineering, and practical guidelines for managing software engineering knowledge. This book provides a comprehensive overview of the state of the art and best practice in knowledge management applied to software engineering. While researchers and graduate students will benefit from the interdisciplinary approach leading to basic frameworks and methodologies, professional software developers and project managers will also profit from industrial experience reports and practical guidelines.

Advanced Information Systems Engineering Klaus R. Dittrich, Andreas Geppert, Moira C. Norrie, 2003-05-15

Since the late 1980s the CAiSE conferences have provided a forum for the presentation and exchange of research results and practical experiences within the field of Information Systems Engineering. CAiSE 2001 was the 13th conference in this series and was held from 4th to 8th June 2001 in the resort of Interlaken located near the three famous Swiss mountains, the Eiger, Mönch, and Jungfrau. The first two days consisted of pre-conference workshops and tutorials. The workshop themes included requirements engineering, evaluation of modeling methods, data integration over the Web, agent-oriented information systems, and the design and management of data warehouses. Continuing the tradition of recent CAiSE conferences, there was also a doctoral consortium. The pre-conference tutorials were on the themes of e-business models and XML application development. The main conference program included three invited speakers, two tutorials, and a panel discussion, in addition to presentations of the papers in these proceedings. We also included a special practice and experience session to give presenters an opportunity to report on and discuss experiences and investigations on the use of methods and technologies in practice. We extend our thanks to the members of the program committee and all other referees without whom such conferences would not be possible. The program committee, whose members came from 20 different countries, selected 27 high-quality research papers and 3 experience reports from a total of 97 submissions. The topics of these papers span the wide range of topics relevant to information systems engineering, from requirements and design through to implementation and operation of complex and dynamic systems.

Cooperative Design of Manufacturing Systems in SMEs Dörte Bastian-Köpp, 2009

Planning and improving of production systems and manufacturing processes is a most complex task in engineering. In small and medium-sized enterprises (SMEs), it is usually carried out by a group of enterprise planners from different departments within a planning project. The main issue of this research is to overcome the logical and technical boundaries between the highly interrelated modelling experts and their specific modelling tools and partial planning models, as well as to efficiently coordinate their distributed cooperative planning tasks. Therefore, a methodical integration concept, as well as a groupware-based cooperation concept, was developed. Now it is possible to combine the large number of sophisticated modelling tools, factory simulators, as well as GPM tools, and to guarantee a seamless planning process. The conceptual ideas were

implemented in a prototypical toolbox to show the technical realization of the flexible concepts for integration and cooperation support Back cover
