Farmers in the Forest Peter R. Kunstadter, Edward Char Chapman, Sanga Sabhasri, 2019-03-31 Farmers in the Forest while using examples chiefly from northern Thailand is concerned with complex problems found in all tropical countries In these areas rapid population growth increasing demands for food and burgeoning international markets for forest products and other raw materials are associated with active competition for land and natural resources in upland areas This book brings together studies by administrators agronomists anthropologists forest ecologists geographers and jurists who describe a variety of swidden systems and their effect on soil forest society and economy They point to conflicts between traditional farming systems and modern legal and administrative constraints now being imposed and they describe special and technological conditions that contribute to a marginal stagnant upland economy increasing socio economic disparities with the lowlands and the serious ecological consequences of these conditions Several possible solutions are suggested to solve these problems

Handbook of Research on Digital Research Methods and Architectural Tools in Urban Planning and Design Abusaada, Hisham, Vellguth, Carsten, Elshater, Abeer, 2019-06-28 The efficient usage investigation and promotion of new methods tools and technologies within the field of architecture particularly in urban planning and design is becoming more critical as innovation holds the key to cities becoming smarter and ultimately more sustainable In response to this need strategies that can potentially yield more realistic results are continually being sought The Handbook of Research on Digital Research Methods and Architectural Tools in Urban Planning and Design is a critical reference source that comprehensively covers the concepts and processes of more than 20 new methods in both planning and design in the field of architecture and aims to explain the ways for researchers to apply these methods in their works Pairing innovative approaches alongside traditional research methods the physical dimensions of traditional and new cities are addressed in addition to the non physical aspects and applied models that are currently under

Nile River Basin Assefa M. Melesse, 2011-03-28 This book presents results of scientific studies ranging from hydrological modelling to water management and policy issues in the Nile River basin It examines the physical hydrometeorological and hydrogeological description of the basin along with analysis in understanding the hydrological processes of the basin under the changing land use stemming from population pressure and increased natural resources tapping The book discusses the increased impact of climate change on the river flows and such issues as water availability and demand management and policy to offset the imbalance between demand and available resources This book will be of interest to researchers practitioners water resources managers policy makers as well as graduate and undergraduate students It is a useful reference text for ecohydrology arid zone hydrology hydrology of transboundary rivers and similar courses

River Basin Management - Challenges and Coping Strategies, 2025-03-19 Rivers are lifelines for both human societies and ecosystems yet they face growing threats from climate change and human activities This book offers a comprehensive exploration of the latest methods and achievements in river research to address these challenges and promote the sustainable management of river systems The book investigates three key themes Firstly advanced monitoring technologies Discover advanced techniques such as wavelet analysis machine learning and environmental DNA methods which provide crucial data for assessing river health and guiding pollution control efforts Secondly improved modeling approaches Explore the soil erosion potential model and the integration of big data and machine learning in hydrodynamic models enabling more precise and effective river management Thirdly the usage of nature based solutions Nature based river restoration was investigated through a case study in Zambia's Kitwe region demonstrating their effectiveness in flood mitigation disaster reduction and ecosystem restoration This book aims to bridge science and practice offering innovative tools and approaches to address our rivers pressing challenges

Ecosystem Services from Agriculture and Agroforestry Bruno Rapidel, Fabrice DeClerck, Jean Francois Le Coq, John Beer, 2012-06-25 Agricultural systems are no longer evaluated solely on the basis of the food they provide but also on their capacity to limit impacts on the environment such as soil conservation water quality and biodiversity conservation as well as their contribution to mitigating and adapting to climate change In order to cope with these multiple service functions they must internalize the costs and benefits of their environmental impact Payments for ecosystem services are hoped to encourage and promote sustainable practices via financial incentives The authors show that while the principle is straightforward the practice is much more complicated Whereas scenic beauty and protection of water sources provide benefits to the local population carbon sequestration and biodiversity conservation can be considered international public goods rendering potential payment schemes more complex Few examples exist where national or international bodies have been able to set up viable mechanisms that compensate

agricultural systems for the environmental services they provide. However, this book provides several examples of successful programs and aims to transfer them to other regions of the world. The authors show that a product can be sold if it is clearly quantified, there exists a means to determine the service's values, and there is a willing buyer. The first two sections of the book present methodological issues related to the quantification and marketing of ecosystem services from agriculture, including agroforestry. The third and final section presents case studies of practical payments for ecosystem services and experiences in Central and South America and draws some lessons learnt for effective and sustainable development of ecosystem services compensation mechanisms.

Forest Hydrology Mingteh Chang, 2006-05-25. Although a few texts on forest hydrology are available, they cover very little if any background on water resources. On the other hand, books dealing with water resources do not cover topics on forest-water relations. The one exception to this is *Forest Hydrology: An Introduction to Water and Forests*. Now, with the publication of a revised edition, this volume adds information from recent studies to go even further in providing an introduction to forest hydrology that brings water resources and forest-water relations into a single practical and comprehensive volume. Focusing on processes and general principles, the first six chapters provide an introduction and basic background in water and water resources, while the last seven chapters look at the impact of forests on water. Between these two groupings is a chapter that serves as an entry to the study of forest impacts on water resources, describing forests and forest characteristics important to water circulation, sediment movement, and stream habitat. This second edition also features new information on forests and flooding, forest and stream habitat, snow vaporization processes, and GIS methods in hydrology research, examples on evaporation estimates, and a new appendix on forest interception measurements. Employing examples and case studies, the book provides tools to help natural resource managers play an active role in policymaking and land use planning and in developing partnerships with stakeholders. It also offers unique perspectives for addressing urban sprawl.

Reservoir Siltation in Ethiopia Lulseged Tamene Desta, 2005.

Social and Ecological System Dynamics Krystyna Stave, Goraw Goshu, Shimelis Aynalem, 2017-04-06. This book is a social-ecological system description and feedback analysis of the Lake Tana Basin, the headwater catchment of the Upper Blue Nile River. This basin is an important local, national, and international resource, and concern about its sustainable development is growing at many levels. Lake Tana Basin outflows of water, sediments, nutrients, and contaminants affect water that flows downstream in the Blue Nile across international boundaries into the Nile River. The lake and surrounding land have recently been proposed as a UNESCO Biosphere Reserve. The basin has been designated as a key national economic growth corridor in the Ethiopian Growth and Transformation Plan. In spite of the Lake Tana Basin's importance, there is no comprehensive integrated system-wide description of its characteristics and dynamics that can serve as a basis for its sustainable development. This book presents both the social and ecological characteristics of the region and an integrated system-wide perspective of the feedback links that shape social and ecological change in the basin. Finally, it summarizes key

research needs for sustainable development **Land, Water and Development** Malcolm Newson, 2002-09-11 This is a fully revised and expanded second edition of Malcolm Newson's acclaimed book Exploring in greater depth the meaning of sustainability in river basin development this new edition highlights the rapid evolution of practical concepts since the Rio Earth Summit features new illustrations and case studies from Australia South Africa and Israel makes the ecosystem model more explicit throughout strengthens coverage of the linkages between land and water management
