Hazards in the UK D.P. Giles,J.S. Griffiths,2020-06-09 The UK is perhaps unique globally in that it presents the full spectrum of geological time stratigraphy and associated lithologies within its boundaries With this wide range of geological assemblages comes a wide range of geological hazards whether they be geophysical earthquakes effects of volcanic eruptions tsunami landslides geotechnical collapsible compressible liquefiable shearing swelling and shrinking soils geochemical dissolution radon and methane gas hazards or georesource related coal chalk and other mineral extraction An awareness of these hazards and the risks that they pose is a key requirement of the engineering geologist The Geological Society considered that a Working Party Report would help to put the study and assessment of geohazards into the wider social context helping the engineering geologist to better communicate the issues concerning geohazards in the UK to the client and the public This volume sets out to define and explain these geohazards to detail their detection monitoring and management and to provide a basis for further research and understanding **Advancing Culture of Living with**

Shukla, 2004-05-28 *Principles of Soil Physics* examines the impact of the physical mechanical and hydrological properties and processes of soil on agricultural production the environment and sustainable use of natural resources The text incorporates valuable assessment methods graphs problem sets and tables from recent studies performed around the globe and offers an abundance of tables photographs and easy to follow equations in every chapter The book discusses the consequences of soil degradation such as erosion inhibited root development and poor aeration It begins by defining soil physics soil mechanics textural properties and packing arrangements The text continues to discuss the theoretical and practical aspects of soil structure and explain the significance and measurement of bulk density porosity and compaction The authors proceed to clarify soil hydrology topics including hydrologic cycle water movement infiltration modeling soil evaporation and solute transport processes They address the impact of soil temperature on crop growth soil aeration and the processes that lead to the emission of greenhouse gases The final chapters examine the physical properties of gravelly soils and water movement in frozen saline and water repellent soils Reader friendly and up to date *Principles of Soil Physics* provides unparalleled coverage of issues related to soil physics structure hydrology aeration temperature and analysis and presents practical techniques for maintaining soil quality to ultimately preserve its sustainability *Landslide Analysis and Early Warning Systems* Benni Thiebes, 2012-01-20 Recent landslide events demonstrate the need to improve landslide forecasting and early warning capabilities in order to reduce related risks and protect human lives In this thesis local and regional investigations were carried out to analyse landslide characteristics in the Swabian Alb region and to develop prototypic landslide early warning systems In the local study area an extensive hydrological and slope movement monitoring system was installed on a seasonally reactivated landslide body located in Lichtenstein Unterhausen Monitoring data was analysed to assess the influence of rainfall and snow melt on groundwater conditions and the initiation of slope movements The coupled hydrology slope stability model CHASM was applied to detect areas most prone to slope failures and to simulate slope stability using a variety of input data Subsequently CHASM was refined and two web based applications were developed a technical early warning system to constantly simulate slope stability integrating rainfall measurements hydrological monitoring data and weather forecasts and a decision support system allowing for quick calculation of stability for freely selectable slope profiles On the regional scale available landslide inventory data were analysed for their use in evaluation of rainfall thresholds proposed in other studies Adequate landslide events were selected and their triggering rainfall and snow melting conditions were compared to intensity duration and cumulative thresholds Based on the results a regional landslide early warning system was developed and implemented as a webbased application Both the local and the regional landslide early warning systems are part of a holistic and integrative early warning chain developed by the ILEWS project and could easily be
