Gain a stronger foundation with optimal ground improvement Before you break ground on a new structure you need to analyze the structure of the ground Expert analysis and optimization of the geo materials on your site can mean the difference between a lasting structure and a school in a sinkhole Sometimes problematic geology is expected because of the location but other times it s only unearthed once construction has begun You need to be able to quickly adapt your project plan to include an improvement to unfavorable ground before the project can safely continue Principles and Practice of Ground Improvement is the only comprehensive up to date compendium of solutions to this critical aspect of civil engineering Dr Jie Han registered Professional Engineer and preeminent voice in geotechnical engineering is the ultimate guide to the methods and best practices of ground improvement Han walks you through various ground improvement solutions and provides theoretical and practical advice for determining which technique fits each situation Follow examples to find solutions to complex problems Complete homework problems to tackle issues that present themselves in the field Study design procedures for each technique to simplify field implementation Brush up on modern ground improvement technologies to keep abreast of all available options Principles and Practice of Ground Improvement can be used as a textbook and includes Powerpoint slides for instructors It s also a handy field reference for contractors and installers who actually implement plans There are many ground improvement solutions out there but there is no single right answer to every situation Principles and Practice of Ground Improvement will give you the information you need to analyze the problem then design and implement the best possible solution

Freeth, Charles O. Ofoegbu, K. Mosto Onuoha, 2013-03-09 Attention to the problems posed by natural hazards in West and Central Africa was brought into sharp focus by the deaths of an estimated 1700 people in the valleys to the north of Lake Nyos in 1986 Prior to that the only well documented major natural catastrophe was the 1983 earthquake which killed at least 275 people in northwestern Guinea Though we would not wish to appear to suggest that the 1939 Accra earthquake which killed 16 people or the Lake Monoun disaster which killed 37 people in 1984 were not significant events for the areas concerned The full horror of the Lake Nyos gas disaster was exacerbated as far as the outside world was concerned by initial uncertainty concerning its cause During the first phase of the investigation there were considerable disagreements between some of the participating groups of scientists Many of these disagreements have now been resolved and it is to be hoped that the contributions in this volume will further help to resolve some of the outstanding uncertainties However although it is important to understand what happened at Lake Nyos in 1986 and why it happened it is more important for the future of that area that further similar disasters should be avoided We can only hope that this volume will help to establish a solid foundation for future research into ways of removing excess gas from the lake **Lime Stabilisation** C.
