Explores the gamut of the interactions among the phases in the soil and the dynamic interconnection of the soil with the subterranean and atmospheric domains. Reveals the salient ideas, approaches, and methods of environmental soil physics. Includes numerous illustrative exercises which are explicitly solved. Designed to serve for classroom and laboratory instruction for self-study and for reference. Oriented toward practical problems in ecology, field-scale hydrology, agronomy, and civil engineering. Differs from earlier texts in its wider scope and holistic environmental conception.

Soils Khan Towhid Osman, 2012-12-03 Aimed at taking the mystery out of soil science. *Soils: Principles, Properties, and Management* is a text for undergraduate/graduate students who study soil as a natural resource. Written in a reader-friendly style with a host of examples, figures, and tables, the book leads the reader from the basics of soil science through to complex situations covering such topics as the origin, development, and classification of soil; physical, chemical, and biological properties of soil; water and nutrient management; management of problem soils; wetland soils; and forest soils; soil degradation. Further, the ecological and agrological functions of soil are emphasized in the context of food security, biodiversity, and climate change. The interactions between the environment and soil management are highlighted. Soil is viewed as an ecosystem itself and as a part of larger terrestrial ecosystems.

Soil and Environmental Analysis Keith A. Smith, 2000-10-12 Reviews a wide range of methods for soil physical analysis. Considers applications, accuracy, measurement time, and cost of equipment. Provides examples of applications.

Soil and Water Contamination Marcel van der Perk, 2013-11-01 *Soil and Water Contamination* 2nd Edition is the first textbook that treats soil and water pollution issues from a geographical/spatial perspective at point, local, regional, and catchment scales. It links up very well to recent environmental policy and legislation in the field of soil and water pollution, e.g., European Water Framework Directive. Treats environmental pollution from 3 perspectives: pollutant transport processes and spatial and temporal variability of occurrence; teaching the student how to assess the spatial dispersal of pollutants in the environment, taking into account the properties of the pollutant, environmental medium, and transport processes. Describes environmental behaviour of major contaminant groups, including nutrients, metals,

radionuclides and organic pollutants which makes it a valuable reference for quick evaluation of the chemical behaviour of pollutants in the environment This textbook provides an overview of transport and fate processes of environmental contamination in such a way that the reader can both understand and predict contaminant patterns in soil groundwater and surface water In contrast to most existing texts soil and water pollution are treated as integrated environmental matter from a geographical spatial perspective at point local regional and catchment scales The spatial approach links up with recent developments and trends in environmental legislation and other integrated catchment management initiatives The new edition contains several re written parts new material on pesticides and pharmaceutical contaminants and a greater number of exercises case studies and examples It consists of four coherent parts 1 Introduction to soil and water contamination 2 Source role and behavior of substances in soil and water 3 Transport and fate processes of substances in soil and water and 4 Patterns of substances in soil and water Soil and Water Contamination 2nd Edition is intended for undergraduate and graduate students in Earth and Environmental Sciences who understand the fundamentals of chemistry hydrology and soil science It is a useful reference work for professionals Author Marcel van der Perk is Assistant Professor of Physical Geography at Utrecht University where he specialises in soil and water quality issues and spatio temporal environmental modelling He teaches courses on soil and water pollution and geographical information systems His research focuses on measurement analysis and modelling of transport and fate of dissolved and sediment associated contaminants nutrients heavy metals and radionuclides in soil and water from field to river basin scales Co Published with CRC Press
