Passive Cooling of Buildings D. Asimakopoulou, 2013-10-31 Energy use in buildings in the EU represents about 40% of the total annual energy consumption With greater awareness of the need to reduce energy consumption comes a growth of interest in passive cooling particularly as an alternative to air conditioning This book describes the fundamentals of passive cooling together with the principles and formulae necessary for its successful implementation The material is comprised largely of information and results compiled under the SAVE European Research Programme Solar Passive Building M. S. Sodha, 1986 *NBS Building Science Series*, 1974 **NBS Building Science Series** United States. National Bureau of Standards, 1980 *Books in Series, 1876-1949* R.R. Bowker Company, 1982 An Economic Model for Passive Solar Designs in Commercial Environments Jeanne W. Powell, 1980 The report presents an economic model for evaluating passive solar designs in commercial environments It discusses the literature on this topic and draws upon this literature to develop a general methodological framework The model incorporates a life cycle costing approach that focuses on the costs of purchase installation maintenance repairs replacement and energy It includes a detailed analysis of tax laws affecting the use of solar energy in commercial buildings Possible methods of treating difficult to measure benefits and costs such as effects of the passive solar design on resale value of the building and on lighting costs rental income from the building and the use of commercial space are presented The model is illustrated in two case examples of prototypical solar designs for low rise commercial buildings in an urban setting Energy in Architecture John R.
