Kane, 1975-06-30 Proceedings of IAU Symposium No 68 held in Buenos Aires Argentina 11 14 June 1974 organized by the IAU in co operation with COSPAR      **Introduction to Solar Radio Astronomy and Radio Physics** A. Krüger, 2012-12-06 1 1 Short History of Solar Radio Astronomy Since its birth in the forties of our century solar radio astronomy has grown into an extensive scientific branch comprising a number of quite different topics covering technical sciences astrophysics plasma physics solar terrestrial physics and other disciplines Historically the story of radio astronomy goes back to the times of James Clerk Maxwell whose well known phenomenological electromagnetic field equations have become the basis of present time radio physics As a direct consequence of these equations Maxwell was able to prognosticate the existence of radio waves which fifteen years later were experimentally detected by the famous work of Heinrich Hertz 1887 88 However all attempts to detect radio waves from cosmic objects failed until 1932 which was mainly due to the early stage of development of receiving techniques and the as yet missing knowledge of the existence of a screening ionosphere which was detected in 1925 Therefore famous inventors like Thomas Edison and A E Kennelly as well as Sir Oliver Lodge were unsuccessful in receiving any radio emission from the Sun or other extraterrestrial sources Another hindering point was that nobody could a priori expect that solar radio emission should have something to do with solar activity so that unfortunately by chance some experiments were carried out just at periods of low solar activity This was also why Karl Guthe Jansky at the birth of radio astronomy detected galactic radio waves but no emission from the Sun      *The Sun from Space* Kenneth R. Lang, 2013-04-18 Our familiar but often inscrutable star exhibits a variety of enigmatic phenomena that have continued to defy explanation Our book begins with a brief account of these unsolved mysteries Scientists could not for example understand how the Sun's intense magnetism is concentrated into dark sunspots that are as large as the Earth and thousands of times more magnetic Nor did they know exactly how the magnetic fields are generated within the Sun for no one could look inside it Another long standing mystery is the million degree solar atmosphere or corona that lies just above the cooler visible solar disk or photosphere Heat should not emanate from a cold object to a hotter one anymore than water should flow up hill Researchers have hunted for the elusive coronal heating mechanism for more than half a century The Sun's hot and stormy atmosphere is continuously expanding in all directions creating a relentless solar wind that seems to blow forever The exact sources of the wind's components and the mechanisms of its acceleration to supersonic velocities also remained perplexing problems The relatively calm solar atmosphere can be violently disrupted by powerful explosions filling the solar system with radio waves X rays and gamma rays and hurling charged particles out into

space at nearly the speed of light      Literature 1988, Part 2 Astronomisches Rechen-Institut,2013-06-29 From the reviews Astronomy and Astrophysics Abstracts has appeared in semi annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world Space Science Reviews 1 Dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts Fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes The Observatory Magazine

Priest, Robert Rosner,2013-06-29 One of the great problems of astrophysics is the unanswered question about the origin and mechanism of chromospheric and coronal heating Just how these outer stellar envelopes are heated is of fundamental importance since all stars have hot chromospheric and coronal shells where the temperature rises to millions of degrees comparable to the temperatures in the stars cores Here for the first time is a comprehensive inventory of the proposed chromospheric and coronal heating theories The proposed heating processes are critically compared and the observational evidence for the

various mechanisms is reviewed This is essential reading for all those working in such fields as stellar activity radio and XUV emission rotation and mass loss for whom a detailed and consistent presentation of our knowledge of chromospheric and coronal heating mechanisms is urgently needed *Cosmical Magnetic Fields* E. Parker, 2019-10-10 This well known and widely used landmark text explores the universal spontaneous generation of magnetic fields in astronomical bodies and the agitation of the bodies by those fields The general properties of magnetic fields their appearance throughout the astronomical universe and the havoc they wreak are described in simple physical terms so as to define the broad scientific problem presented by magnetic fields Then with the physical problems clearly in mind the theoretical effects are demonstrated with formal mathematical illustrations from the basic electromagnetic equations Oxford Classic Texts in the Physical Sciences From James Clerk Maxwell's towering achievement *Treatise on electricity and magnetism* to today's ground breaking research Oxford University Press has often been regarded as the publisher of first choice for generations of scientists The legacy of this long publishing tradition is an unrivalled catalogue of past publications some of which have been unavailable from us for many years By popular demand Oxford University Press is now reissuing some of its most celebrated science classics in the Oxford Classic Texts series The titles to be included have been selected not only for their historic significance but also for their enduring eloquence and clarity of presentation Individually each book in this collection represents a milestone in the development of scientific thought and pedagogy collectively these books amount to an unparalleled scientific library for the enjoyment of a new generation of readers

**Comic Rays in Interplanetary Magnetism Fields** I.N. Toptygin, 2012-12-06 Fast particles of natural or  $\gamma$  cosmic rays have been used for a long time as an important source of astrophysical and geophysical information A study of cosmic ray spectra time variations abundances gradients and anisotropy provides a wealth of data on physical conditions in the regions of cosmic ray generation as well as in the media through which cosmic rays propagate Astrophysical aspects of cosmic ray physics have been considered in a number of monographs The most detailed seems to be *The Origin of Cosmic Rays* by V L Ginzburg and S I Syrovatskij 1964 which is however concerned mainly with galactic cosmic rays The physics of the circumsolar space is discussed in this book only rather briefly Several other monographs have been devoted mostly to the physics of the interplanetary medium and cosmic rays in interplanetary space These include the books by Dorman 1963 1975a b Parker 1963 Dorman and Miroshnichenko 1968 The present monograph differs from the above mentioned books in two main aspects i It presents a unified theoretical approach to analysing the properties of fast particles in interplanetary space based upon consideration of cosmic rays as a highly energetic component of the interplanetary plasma which makes use of the plasma physics methods to describe the behaviour of cosmic rays

**Solar-Terrestrial Influences on Weather and Climate** Billy McCormac, T.A. authors and publisher have made a special effort for rapid publication. The length of the individual papers in this book were deliberately limited by the editors. Direct financial support for the Symposium Workshop was provided by NASA. Palo Alto: Billy M. McCormac; Columbus: Thomas A. Seliga. January 1979. xiii. SYMPOSIUM WORKSHOP CONCLUSIONS. Billy M. McCormac, Department 5210 B202, Lockheed Palo Alto Research Laboratory, 3251 Hanover Street, Palo Alto, CA 94304, USA. Thomas A. Seliga, Atmospheric Sciences Program, The Ohio State University, 2015 Neil Avenue, Columbus, OH 43210, USA. A. INTRODUCTION. The Symposium Workshop on Solar Terrestrial Influences on Weather and Climate was held at The Ohio State University on 24-28 July 1978. Its purpose was to provide an international forum for the presentation and discussion of recent research results and ideas regarding the question whether variations in solar outputs affect terrestrial weather and climate and if so to what extent and through what mechanisms. The Symposium focused on the results of previous studies and consisted of both invited and contributed papers. The Workshop on the other hand built upon these deliberations to develop ideas and directions for future research. Over one hundred persons from eight countries attended the Symposium Workshop.

**Solar Magnetohydrodynamics** E.R. Priest, 2012-12-06. I have felt the need for a book on the theory of solar magnetic fields for some time now. Most books about the Sun are written by observers or by theorists from other branches of solar physics, whereas those on magnetohydrodynamics do not deal extensively with solar applications. I had thought of waiting a few decades before attempting to put pen to paper, but one summer Josip Kleczek encouraged an immediate start while your ideas are still fresh. The book grew out of a postgraduate lecture course at St Andrews and the resulting period of gestation or being with monograph has lasted several years. The Sun is an amazing object which has continued to reveal completely unexpected features when observed in greater detail or at new wavelengths. What riches would be in store for us if we could view other stars with as much precision. Stellar physics itself is benefiting greatly from solar discoveries, but in turn our understanding of many solar phenomena such as sunspots, sunspot cycles, the corona and the solar wind will undoubtedly increase in the future due to their observation under different conditions in other stars. In the old days the solar atmosphere was regarded as a static plane-parallel structure heated by the dissipation of sound waves and with its upper layer expanding in a spherically symmetric manner as the solar wind. Outside of sunspots the magnetic field was thought to be unimportant with a weak uniform value of a few gauss.

**Frontiers of Astrophysics** Eugene H. Avrett, 1976. One of the most vigorous sciences of our time, astrophysics constantly changes under the impact of new discoveries about everything from our own sun to the most distant and exotic of extragalactic phenomena. In chapters written especially for this volume, twelve distinguished scientists actively pursuing astrophysical research offer up-to-date reviews and commentary on new developments in their fields. With a little grounding in astronomy or physics, the reader will find this book an invaluable source of basic information on the most recent work in this field. *Frontiers of Astrophysics* can be used as classroom reading, either as a main text or as supplementary reading in astronomy or physics courses, and it can be read with profit by anyone who wants current
